# Product Overview

---

TIBCO BusinessEvents is a declarative, distributed event processing platform covering multiple event processing tasks.

TIBCO BusinessEvents allows you to abstract and correlate meaningful business information from the events and data flowing through your information systems, and take appropriate actions using business rules. By detecting patterns within the real-time flow of events, TIBCO BusinessEvents can help you to detect and understand unusual activities as well as recognize trends, problems, and opportunities.

# Security in TIBCO BusinessEvents

---

TIBCO BusinessEvents ensures security by implementing the following measures of securing the application and its data.

- Access control
- Secure communication with external components
- Securing data at rest

Rest of the document details the various relevant TIBCO BusinessEvents components and mechanisms to configure security for these components.

## Channels

Channels represent physical connections to a resource, such as a Rendezvous daemon, JMS server, HTTP server or client, Hawk domain, StreamBase server, FTL realm server.

TIBCO BusinessEvents provides a way to configure secure connectivity (over SSL) as well as authentication (as applicable) for channels to improve security between TIBCO BusinessEvents and these resources. All passwords that you add to a channel are encrypted.

The specific configuration details vary for specific types of channel. For details about how security is configured for a specific channel, see *TIBCO BusinessEvents Developer Guide*.

## Cluster Providers, Cache Providers and Stores

Depending on the project configuration, TIBCO BusinessEvents needs to communicate with external systems at runtime through cluster providers, cache providers, store providers, and metrics stores.

Secure connectivity to these external systems can be configured based on the secure configuration provided by these products. For details about configuring secure connectivity to these providers, see *TIBCO BusinessEvents Configuration Guide*.

## Rule Management Server (RMS)

RMS is a web-based application that provides an online tool to create and manage business rules and decision tables.

For details about the following security measures implemented in RMS, see *TIBCO BusinessEvents WebStudio User Guide*:

- Configuring file based or LDAP based authentication mechanism to secure access to the application. See *TIBCO BusinessEvents Administration* and *TIBCO BusinessEvents WebStudio User Guide*.
- Setting role-based authorization of various WebStudio operations to RMS users. See *TIBCO BusinessEvents WebStudio User Guide*.
- Configuring one-way or two-way SSL authentication between WebStudio and RMS. See *TIBCO BusinessEvents WebStudio User Guide*.

## JMX

TIBCO BusinessEvents supports JMX based monitoring using tools such as JConsole to view the exposed MBeans. User based authentication as well as enabling SSL transport is supported.

For details, see *TIBCO BusinessEvents Administration*.

## TIBCO BusinessEvents Enterprise Administrator Agent

TIBCO® Enterprise Administrator provides a centralized administrative interface to manage and monitor multiple TIBCO products deployed in an enterprise.

TIBCO BusinessEvents Enterprise Administrator Agent is the backend server process that provides management and monitoring functionality for a TIBCO BusinessEvents application and cluster. The agent communicates with the TIBCO Enterprise Administrator Server for UI interactions and communicates with BusinessEvents instances using JMX. The BusinessEvents Enterprise Administrator Agent communicates with the remote machines for deployments using Secure Shell (SSH).

You can configure one-way or two-way SSL authentication between TIBCO Enterprise Administrator and TIBCO BusinessEvents Enterprise Administrator agent. For details, see *TIBCO BusinessEvents Administration*.

# Sensitive Configuration Data Protection

---

In TIBCO BusinessEvents, you can encrypt any sensitive configuration data that you might need to store in the configuration file. All configuration fields of the “Password” type are stored in CDD in an encrypted format.

You can use catalog functions to interact with external servers. HTTP, AS, Store and other functions accept secure connectivity details.

# TIBCO Documentation and Support Services

---

For information about this product, you can read the documentation, contact TIBCO Support, and join TIBCO Community.

## How to Access TIBCO Documentation

Documentation for TIBCO products is available on the [Product Documentation website](#), mainly in HTML and PDF formats.

The [Product Documentation website](#) is updated frequently and is more current than any other documentation included with the product.

## Product-Specific Documentation

The documentation for this product is available on the [TIBCO BusinessEvents® Enterprise Edition Documentation](#) page.

To directly access documentation for this product, double-click the file at the following location:

`TIBCO_HOME/release_notes/TIB_businessevents-enterprise_6.3.1_docinfo.html`

where `TIBCO_HOME` is the top-level directory in which TIBCO products are installed. On Windows, the default `TIBCO_HOME` is `C:\tibco`. On UNIX systems, the default `TIBCO_HOME` is `/opt/tibco`.

## Other TIBCO Product Documentation

When working with TIBCO BusinessEvents Enterprise Edition, you may find it useful to read the documentation of the following TIBCO products:

- TIBCO ActiveSpaces®: It is used as the cluster, cache, or store provider for the TIBCO BusinessEvents Enterprise Edition project.
- TIBCO FTL®: It is used as the cluster provider for the TIBCO BusinessEvents Enterprise Edition project.

## How to Access Related Third-Party Documentation

When working with TIBCO BusinessEvents® Enterprise Edition, you may find it useful to read the documentation of the following third-party products:

- Apache Ignite
- Apache Kafka
- Confluent Kafka Schema Registry
- TIBCO Messaging - Schema Repository for Apache Kafka
- Apache Pulsar
- GridGain
- Apache Cassandra
- Grafana
- InfluxDB
- OpenTelemetry
- Control Plane
- Apache Maven

## How to Contact Support for TIBCO Products

You can contact the Support team in the following ways:

- To access the Support Knowledge Base and getting personalized content about products you are interested in, visit our [product Support website](#).
- To create a Support case, you must have a valid maintenance or support contract with a Cloud Software Group entity. You also need a username and password to log in to the [product Support website](#). If you do not have a username, you can request one by clicking **Register** on the website.

## How to Join TIBCO Community

TIBCO Community is the official channel for TIBCO customers, partners, and employee subject matter experts to share and access their collective experience. TIBCO Community offers access to Q&A forums, product wikis, and best practices. It also offers access to extensions, adapters, solution accelerators, and tools that extend and enable customers to

gain full value from TIBCO products. In addition, users can submit and vote on feature requests from within the [TIBCO Ideas Portal](#). For a free registration, go to [TIBCO Community](#).
