

**TIBCO BusinessEvents®**

## **Installation**

*Software Release 5.6  
August 2019*

## Important Information

SOME TIBCO SOFTWARE EMBEDS OR BUNDLES OTHER TIBCO SOFTWARE. USE OF SUCH EMBEDDED OR BUNDLED TIBCO SOFTWARE IS SOLELY TO ENABLE THE FUNCTIONALITY (OR PROVIDE LIMITED ADD-ON FUNCTIONALITY) OF THE LICENSED TIBCO SOFTWARE. THE EMBEDDED OR BUNDLED SOFTWARE IS NOT LICENSED TO BE USED OR ACCESSED BY ANY OTHER TIBCO SOFTWARE OR FOR ANY OTHER PURPOSE.

USE OF TIBCO SOFTWARE AND THIS DOCUMENT IS SUBJECT TO THE TERMS AND CONDITIONS OF A LICENSE AGREEMENT FOUND IN EITHER A SEPARATELY EXECUTED SOFTWARE LICENSE AGREEMENT, OR, IF THERE IS NO SUCH SEPARATE AGREEMENT, THE CLICKWRAP END USER LICENSE AGREEMENT WHICH IS DISPLAYED DURING DOWNLOAD OR INSTALLATION OF THE SOFTWARE (AND WHICH IS DUPLICATED IN THE LICENSE FILE) OR IF THERE IS NO SUCH SOFTWARE LICENSE AGREEMENT OR CLICKWRAP END USER LICENSE AGREEMENT, THE LICENSE(S) LOCATED IN THE "LICENSE" FILE(S) OF THE SOFTWARE. USE OF THIS DOCUMENT IS SUBJECT TO THOSE TERMS AND CONDITIONS, AND YOUR USE HEREOF SHALL CONSTITUTE ACCEPTANCE OF AND AN AGREEMENT TO BE BOUND BY THE SAME.

ANY SOFTWARE ITEM IDENTIFIED AS THIRD PARTY LIBRARY IS AVAILABLE UNDER SEPARATE SOFTWARE LICENSE TERMS AND IS NOT PART OF A TIBCO PRODUCT. AS SUCH, THESE SOFTWARE ITEMS ARE NOT COVERED BY THE TERMS OF YOUR AGREEMENT WITH TIBCO, INCLUDING ANY TERMS CONCERNING SUPPORT, MAINTENANCE, WARRANTIES, AND INDEMNITIES. DOWNLOAD AND USE OF THESE ITEMS IS SOLELY AT YOUR OWN DISCRETION AND SUBJECT TO THE LICENSE TERMS APPLICABLE TO THEM. BY PROCEEDING TO DOWNLOAD, INSTALL OR USE ANY OF THESE ITEMS, YOU ACKNOWLEDGE THE FOREGOING DISTINCTIONS BETWEEN THESE ITEMS AND TIBCO PRODUCTS.

This document is subject to U.S. and international copyright laws and treaties. No part of this document may be reproduced in any form without the written authorization of TIBCO Software Inc.

TIBCO, the TIBCO logo, the TIBCO O logo, ActiveMatrix, ActiveMatrix BusinessWorks, ActiveSpaces, TIBCO Administrator, TIBCO BusinessEvents, TIBCO Designer, Enterprise Message Service, TERR, TIBCO FTL, Hawk, TIBCO LiveView, TIBCO Runtime Agent, Rendezvous, and StreamBase are either registered trademarks or trademarks of TIBCO Software Inc. in the United States and/or other countries.

Java and all Java based trademarks and logos are trademarks or registered trademarks of Oracle and/or its affiliates.

All other product and company names and marks mentioned in this document are the property of their respective owners and are mentioned for identification purposes only.

This software may be available on multiple operating systems. However, not all operating system platforms for a specific software version are released at the same time. Please see the readme.txt file for the availability of this software version on a specific operating system platform.

THIS DOCUMENT IS PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT.

THIS DOCUMENT COULD INCLUDE TECHNICAL INACCURACIES OR TYPOGRAPHICAL ERRORS. CHANGES ARE PERIODICALLY ADDED TO THE INFORMATION HEREIN; THESE CHANGES WILL BE INCORPORATED IN NEW EDITIONS OF THIS DOCUMENT. TIBCO SOFTWARE INC. MAY MAKE IMPROVEMENTS AND/OR CHANGES IN THE PRODUCT(S) AND/OR THE PROGRAM(S) DESCRIBED IN THIS DOCUMENT AT ANY TIME.

THE CONTENTS OF THIS DOCUMENT MAY BE MODIFIED AND/OR QUALIFIED, DIRECTLY OR INDIRECTLY, BY OTHER DOCUMENTATION WHICH ACCOMPANIES THIS SOFTWARE, INCLUDING BUT NOT LIMITED TO ANY RELEASE NOTES AND "READ ME" FILES.

This and other products of TIBCO Software Inc. may be covered by registered patents. Please refer to TIBCO's Virtual Patent Marking document (<https://www.tibco.com/patents>) for details.

# TIBCO Documentation and Support Services

---

## How to Access TIBCO Documentation

Documentation for TIBCO products is available on the TIBCO Product Documentation website, mainly in HTML and PDF formats.

The TIBCO Product Documentation website is updated frequently and is more current than any other documentation included with the product. To access the latest documentation, visit <https://docs.tibco.com>.

## Product-Specific Documentation

Documentation for TIBCO products is not bundled with the software. Instead, it is available on the TIBCO Documentation site. To directly access documentation for this product, double-click the following file:

`TIBCO_HOME/release_notes/TIB_businesses-events-enterprise_5.6.0_docinfo.html` where `TIBCO_HOME` is the top-level directory in which TIBCO products are installed. On Windows, the default `TIBCO_HOME` is `C:\tibco`. On UNIX systems, the default `TIBCO_HOME` is `/opt/tibco`.

The following documents for this product can be found in the TIBCO Documentation site:

- *TIBCO BusinessEvents Release Notes*
- *TIBCO BusinessEvents Installation*
- *TIBCO BusinessEvents Getting Started*
- *TIBCO BusinessEvents Architect's Guide*
- *TIBCO BusinessEvents Administration*
- *TIBCO BusinessEvents Developer's Guide*
- *TIBCO BusinessEvents Cloud Deployment Guide*
- *TIBCO BusinessEvents Data Modeling Developer's Guide*
- *TIBCO BusinessEvents Event Stream Processing Pattern Matcher Developer's Guide*
- *TIBCO BusinessEvents Event Stream Processing Query Developer's Guide*
- *TIBCO BusinessEvents Configuration Guide*
- *TIBCO BusinessEvents WebStudio User's Guide*
- *TIBCO BusinessEvents Decision Manager User's Guide*
- Online References:
  - *TIBCO BusinessEvents Java API Reference*
  - *TIBCO BusinessEvents Functions Reference*

## How to Contact TIBCO Support

You can contact TIBCO Support in the following ways:

- For an overview of TIBCO Support, visit <http://www.tibco.com/services/support>.
- For accessing the Support Knowledge Base and getting personalized content about products you are interested in, visit the TIBCO Support portal at <https://support.tibco.com>.
- For creating a Support case, you must have a valid maintenance or support contract with TIBCO. You also need a user name and password to log in to <https://support.tibco.com>. If you do not have a user name, you can request one by clicking Register on the website.

## How to Join TIBCO Community

TIBCO Community is the official channel for TIBCO customers, partners, and employee subject matter experts to share and access their collective experience. TIBCO Community offers access to Q&A forums, product wikis, and best practices. It also offers access to extensions, adapters, solution accelerators, and tools that extend and enable customers to gain full value from TIBCO products. In addition, users can submit and vote on feature requests from within the [TIBCO Ideas Portal](#). For a free registration, go to <https://community.tibco.com>.

# Installation

---

The TIBCO Universal Installer is used to install and uninstall this TIBCO BusinessEvents software.

## TIBCO BusinessEvents Components and Add-on Products

This section lists the product components and add-on products.

### TIBCO BusinessEvents® Enterprise Edition Components

TIBCO BusinessEvents Enterprise Edition comprises of several components using which the BusinessEvents performs different functions.

- **TIBCO BusinessEvents Studio** - Eclipse-based component for designing TIBCO BusinessEvents projects.
- **TIBCO BusinessEvents DataGrid** - Used for cache functionality. It can be updated separately. This component requires TIBCO ActiveSpaces to be installed in same *TIBCO\_HOME* as TIBCO BusinessEvents.
- **Enterprise Administrator Agent** - A back-end server process that provides management and monitoring functionality for a BusinessEvents application and cluster. It communicates with the TIBCO Enterprise Administrator Server for UI interactions.
- **Monitoring and Management** - A configurable web-based user interface for monitoring and managing TIBCO BusinessEvents clusters.
- **Eclipse Platform** - A provided Eclipse platform. If you do not use the provided Eclipse installation, you must have a preexisting Eclipse installation, at the supported release level. See [Existing Eclipse \(or TIBCO Business Studio\) Installation](#) for more information.
- **Examples** - Few example BusinessEvents projects to help you learn TIBCO BusinessEvents faster.
- **Rules Management Server (RMS)** - A lightweight server component for managing the repository of projects. It also includes the client component, WebStudio, which is a web-based user interface that allows business users to create and manage business rules in a web browser.
- **Database Concepts** - Database concepts are TIBCO BusinessEvents concepts that you create by mapping tables or views from a database to TIBCO BusinessEvents concepts.
- **State Modeler** - A component to create state models on the lifecycle of concepts based on UML-standard definitions.
- **Decision Manager** - The component provides TIBCO BusinessEvents Decision Manager Desktop Application and Rules Management Server features that help you to author, test and submit rules for approval and deployment to a TIBCO BusinessEvents application.
- **Live DataMart Plugin** - The component provides the capability to use TIBCO LiveView Web to display the changes to the BusinessEvents project in various visualizations.
- **Query** - The component enables you to query the event streams and data caches.
- **Pattern Matcher Framework** - The component enables pattern matching functionality in the event streams.
- **Oracle Elliptic Curve Cryptography Library** - Select the component if you want to use the Elliptic Curve Cryptography (ECC) ciphers with SSL/TLS configurations. Without the ECC library, the SSL/TLS functionality is still available, but without the ECC ciphers.

### Add-on Products

When you install TIBCO BusinessEvents® Enterprise Edition, you can also install any add-on products you have purchased.

The following TIBCO BusinessEvents add-ons are available in this release:

- TIBCO BusinessEvents Process Orchestration
- TIBCO BusinessEvents Views

Install all add-ons that are at the same version as TIBCO BusinessEvents. Do not install add-ons before you have installed TIBCO BusinessEvents. (You can, however, install TIBCO BusinessEvents and add-ons at the same time, as explained in the installation instructions.)

## Installation Overview

Add-ons must be at the same version as TIBCO BusinessEvents in order to work correctly. When you upgrade TIBCO BusinessEvents, you must also upgrade the add-on products in use to the same version. Similarly, you cannot install a later version of an add-on onto an earlier version of TIBCO BusinessEvents.

### Deploying with TIBCO Administrator on the Same Machine

If TIBCO Administrator is used to deploy TIBCO BusinessEvents applications and both are installed on the same machine, then install TIBCO Runtime Agent and TIBCO Administrator before you install TIBCO BusinessEvents. TIBCO Administrator does not find TIBCO BusinessEvents, if TIBCO BusinessEvents is installed before TIBCO Administrator.

This requirement does not apply on machines where TIBCO BusinessEvents will be used for design-time activities only.

### Using Oracle Coherence as Alternative Cache Provider

Only TIBCO BusinessEvents DataGrid is provided with TIBCO BusinessEvents. Alternatively, you can use a supported version of Oracle Coherence, for which you must have a license that is appropriate for your usage.

### Using OpenSSH for TIBCO BusinessEvents Monitoring and Management

TIBCO BusinessEvents Monitoring and Management (MM) is a provided component. It is one of the options available for deployment, monitoring, and management. (If TIBCO Administrator is used in your environment, you can use it instead.)

OpenSSH is one of the options available to enable MM to perform remote start and deployment of TIBCO BusinessEvents engines running on Microsoft Windows. See the product readme for supported versions of the third-party software.

### Required and Optional Products and Supported Platforms

For details about supported platforms, related TIBCO software, and third-party products, see the product readme file available at <https://docs.tibco.com>.

### Installation History Log Files

Installation and uninstallation history is kept in log files in the `.TIBCO` directory within the installer's user (or home) directory.

The folder names use this format:

```
install_year-month-day.time
maintenance_year-month-day.time
```

The installation log files record environment details such as the user that invoked the installer, hostname, operating system details, and so on.

### TIBCO Home and Default Installation Directory

The installer prompts you to specify the TIBCO home (`TIBCO_HOME`) where you want to install TIBCO BusinessEvents. Each TIBCO home is a separate environment. You can install the same software into

different environments safely, for example, for test, QA, and staging purposes. You can install multiple TIBCO products into the same environment or into different ones. See [Using Multiple TIBCO Homes](#).

A TIBCO home has a name and a directory on disk. The directory is the root directory for all TIBCO products you want to install into this TIBCO home.

When installing multiple TIBCO products into a single TIBCO Home, ensure that all the products are compatible.

### Microsoft Windows

The default installation location is the `TIBCO_HOME` where all TIBCO products are installed. Typically, `TIBCO_HOME` is `c:\tibco`.

The Start menu path to the executable files includes the environment as follows:

**Start > TIBCO > `TIBCO_HOME` > TIBCO BusinessEvents <version\_number>**

The name is also appended to the name of Windows services created by the installer.

### UNIX

The default installation directory depends on who performs the installation:

- For root users, the default installation directory is `/opt/tibco`.
- For non-root users, the default installation directory is `/<myhome>/tibco`, where *<myhome>* is the home directory of the user.

## Using Multiple TIBCO Homes

Install multiple products, or multiple versions of the same product, in the same machine in separate *TIBCO\_HOME*, so that all of them can function smoothly.

It is possible that certain versions of TIBCO software products installed on your computers may not work well together. You may also want to install multiple versions of the same product on the same machine, for example if you are testing the current release while using the prior release in production. To avoid any issues, one solution is to install each product version in its own *TIBCO\_HOME*, under a common parent directory, for example called `tibco`.

In the following example, `be_40`, `be_50`, `bw_59` and `administrator_57` are all separate TIBCO homes:

```
tibco/
  be_40/
    be
  be_50/
    be
  bw_59/
    bw
  administrator_57/
    administrator
```

## Using an Existing Eclipse (or TIBCO Business Studio™) Installation

Using the bundled Eclipse software is recommended. However, you can optionally use an existing Eclipse installation. You can, for example, use the Eclipse installation provided with TIBCO Business Studio business modeling software. This option is not available with partial installers (commonly used for service pack releases).

### Limiting Access to TIBCO BusinessEvents Installations

Here is another case for using an existing Eclipse installation. In some enterprises, users are given limited access to software, such as TIBCO BusinessEvents. All users, however, require full rights to the Eclipse installation because certain files are written during normal use of BusinessEvents Studio. In this case you must install Eclipse separately, in areas where users have permission to write.

See [Existing Eclipse \(or TIBCO Business Studio\) Installation](#).

## LGPL GTK Plugin for Eclipse

You can now install an LGPL GTK plugin for Eclipse.

You can either manually download the LGPL plugin or use the TIBCO Universal Installer download to it for installation.

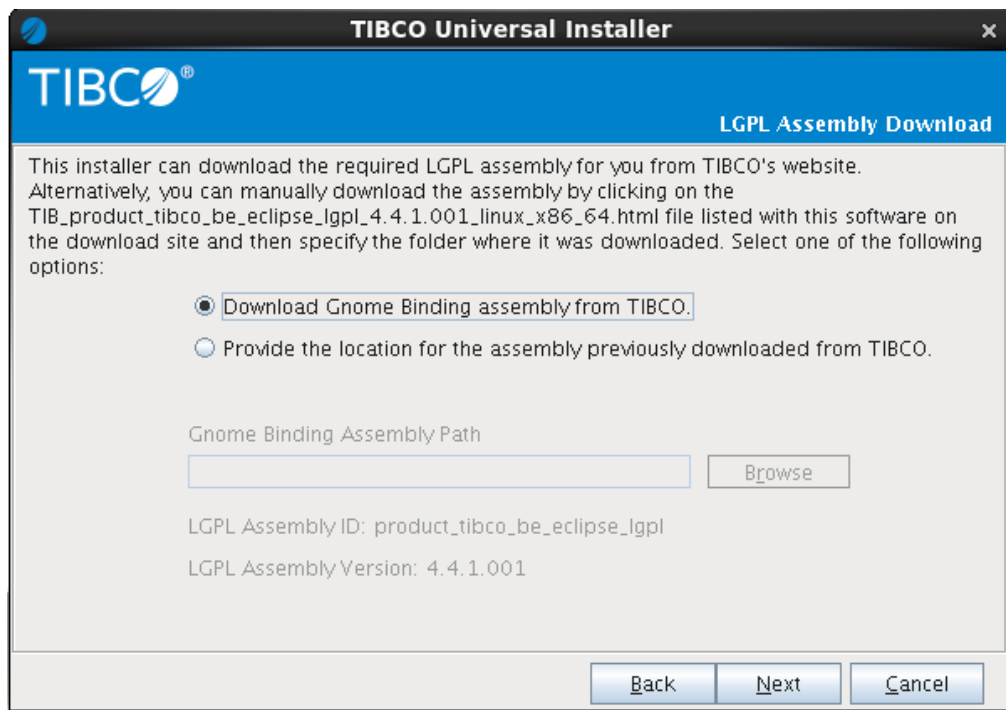

- This procedure is applicable to the Linux, HP-UX, AIX, and Solaris platforms. Installation for Windows and Mac remain unchanged.
- If you have performed installation before, using same installers with on-the-fly download option, the LGPL plug-ins are present in assemblies folder. Thus, in such case, the installer do not prompts for the LGPL plug-ins download.

### Procedure

1. During installation, select the option to use the TIBCO Universal Installer to download the LGPL plugin and install the plugin from the public TIBCO download site.
  - **GUI Mode** - Select the **Download Gnome Binding assembly from TIBCO** option in the LGPL Assembly Window of the installer for Linux.

#### *LGPL Assembly Download Window for Linux*

- **Console Mode** - When the installer prompts for the action to perform for LGPL assembly download, enter 1 to select the option Download Gnome Binding assembly from the public TIBCO download site.
- **Silent Mode** - Specify the following properties in the silent file:
 

```
<entry key="LGPLAssemblyLicenseAccepted">true</entry>
<entry key="LGPLAssemblyDownload">true</entry>
<entry key="LGPLAssemblyPath"></entry>
```

The downloaded plugins are placed at the following locations:

- `TIBCO_HOME/eclipse-platform/eclipse/plugins/`

- `<installer_path>/assemblies/`
2. Alternatively, you can download the LGPL plugin separately and then provide the downloaded location to the installer. Installer then uses that assembly for installation.
    - a) Download the platform-specific LGPL plugin from [http://public.tibco.com/pub/tibco\\_oss/eclipse\\_lgpl/](http://public.tibco.com/pub/tibco_oss/eclipse_lgpl/).  
For example, for Linux download the `product_tibco_be_eclipse_lgpl_4.4.1.001_linux_x86_64.zip` archive.
    - b) Provide the path of the downloaded plugin to the installer.
      - **GUI Mode** - Select the **Provide the location for the assembly previous downloaded from TIBCO** option in the LGPL Assembly Download window of the installer. Click **Browse** and select the location of the downloaded LGPL plugin for the **Gnome Binding Assembly Path** field.
      - **Console Mode** - When installer prompts for the action to perform for LGPL assembly download, enter 2 to select the option Specify the location of a previously downloaded Gnome Binding assembly. Now enter the file path to the downloaded LGPL plugin in command line.
      - **Silent Mode** - Specify the following properties in the silent file:
 

```
<entry key="LGPLAssemblyLicenseAccepted">true</entry>
<entry key="LGPLAssemblyDownload">false</entry>
<entry key="LGPLAssemblyPath">filePathToDownloadedPlugin</entry>
```

Installer places the plugins at `TIBCO_HOME/eclipse-platform/eclipse/plugins/`.

## Upgrading TIBCO BusinessEvents

Read [Migrating Projects from Earlier Versions](#) before upgrading.

### Standard Upgrade Procedures

Software from TIBCO uses three numbers to indicate whether the release is major, minor or a patch. For example, 5.0.0 indicates a major release, 5.1.0 indicates a minor release and 5.1.1 indicates a service pack release.

The installer for a service pack release performs an automatic upgrade. For example, the installer would automatically upgrade TIBCO BusinessEvents 5.1.0 to 5.1.1 by overwriting the contents of the 5.1 directory.

### Installing Over the Same Version

Note that if you are reinstalling over the same version, if any files are currently locked (that is, in use), the installer marks the file for deletion in the install location. After installation if the installer prompts you to reboot your system, you must reboot before using the software.

# Installation Requirements

Before you run the installer, ensure that you meet all the hardware and software requirements and you have appropriate privileges to run the installer.

Check the TIBCO Product Support website at <https://support.tibco.com> for product information that was not available at release time. Entry to this site requires a username and password. If you do not have a username, you can request one. You must have a valid maintenance or support contract to use this site.

If TIBCO Administrator is used to deploy TIBCO BusinessEvents applications and both are installed on the same machine, then install TIBCO Runtime Agent and TIBCO Administrator before you install TIBCO BusinessEvents. TIBCO Administrator do not find TIBCO BusinessEvents, if TIBCO BusinessEvents is installed before TIBCO Administrator.

## Installer Account

Ensure that you have the appropriate privileges, depending on the platform on which you are installing.

| Platform          | Account Privileges   |
|-------------------|--|
| Microsoft Windows | <p>You must have administrator privileges for the machine on which the software is installed. If you do not have administrator privileges, the installer exits. You must then log out of the system and log in as a user with the required privileges, or request your system administrator to assign the privileges to your account.</p> <p>If you intend to install the product from a network drive, you must ensure that the account used for installation has permission to access the network drive.</p>   |
| Linux             | <p>The software can be installed by a regular (non-root) user and super-user (root). Different users can install the same product at different locations.</p> <p>The user performing the installation must have Read Write Execute permissions on all files and directories, after the file is unpacked. The file structure after unpacking must be identical to the structure that was packed.</p> <p>Installation of TIBCO BusinessEvents add-on products must be performed by the same user who installed TIBCO BusinessEvents. Dependency checking will not work correctly unless the same user installs all dependent products.</p> <p>A windowing environment such as CDE (that is, X11 Windows) is required to run the installer in GUI mode.</p> |

## Hardware and Software Requirements

The product has certain hardware and software requirement for installation.

For information about the hardware and software requirements, as well as supported platforms, related TIBCO software, and third-party products, see the readme file that is provided with the product.

### TIBCO ActiveSpaces® Enterprise Edition

TIBCO BusinessEvents software requires TIBCO ActiveSpaces® Enterprise Edition to be installed in the same *TIBCO\_HOME* as TIBCO BusinessEvents. Refer the readme file for the minimum product version requirements. For more information on how to install TIBCO ActiveSpaces Enterprise Edition, refer to the *TIBCO ActiveSpaces documentation*.

If your application do not use or need TIBCO DataGrid, select the **Customize Installation** check box and clear the **TIBCO BusinessEvents Datagrid** option in the Component Selection page during installation. In such case only the *In memory* functionality would be available in BusinessEvents.

### **TIBCO® Enterprise Administrator**

TIBCO Enterprise Administrator needs to be installed, if you want to use TIBCO Enterprise Administrator console for monitoring and managing TIBCO BusinessEvents application. BusinessEvents uses TIBCO BusinessEvents Enterprise Administrator Agent for communicating with TIBCO Enterprise Administrator. BusinessEvents Enterprise Administrator Agent is part of the TIBCO BusinessEvents Standard installation options and is installed at `BE_HOME/teagent`.

# Installing the Software

The TIBCO Universal Installer can be used to install in GUI mode, console mode, or silent mode.

You can install multiple products at one time by extracting the product archive files to the same temporary directory. For example, you can install TIBCO BusinessEvents and one or more add-ons together. Or if you have already installed TIBCO BusinessEvents, you can install multiple add-ons together.

This technique works in the GUI and Console modes but not in Silent mode. In Silent mode, the silent installation file is overwritten with the last product that you extract, and installs only the last extracted product.

## Installing in GUI Mode

When you run the installer in GUI mode, it prompts you for information about the installation environment, and allows other customization.

### Procedure

1. Prepare to install as follows:
  - a) Log in to the system on which you want to install TIBCO BusinessEvents.
  - b) Extract the TIBCO BusinessEvents product archive file to a temporary directory then navigate to that directory. You can also extract the product archive files for all TIBCO BusinessEvents add-on products that you are installing to the same temporary directory. See the Tip section above,
2. Run the TIBCO Universal Installer executable (**TIBCOUniversalInstaller\***).
3. Review the information in the Welcome dialog. If you are installing multiple add-ons, they are listed in this dialog. Click **Next**.
4. The License Agreement dialog displays. Review the terms of the license agreement and, if you agree to them, click **I accept the terms of the license agreement**. Then click **Next** to continue with the installation. If you are also installing add-on products, you must accept each license separately.  
(If you do not agree to the terms of the license agreement, click **Cancel** to exit from the installation process.)
5. Select or create a TIBCO home. For more details and guidelines see [TIBCO Home and Default Installation Directory](#). Do one of the following:
  - Select **Use an Existing TIBCO\_HOME** and select a home from the list.  
For a service pack, select the TIBCO home used by the prior release.
  - Select **Create a new TIBCO\_HOME** and specify a new TIBCO installation directory. Enter the directory path or click **Browse** to select a directory.  
Click **Next**.

The selected directory name is automatically taken as the environment name for the new TIBCO Installation.
6. For full installers only, you can customize the installation as follows.  
(If you don't want to customize the installation just click **Next** without checking the **Customize Installation** checkbox and go to [step 5](#).)
  - a) Check the **Customize Installation** check box.
  - b) Optionally select only the components you want to install. See [TIBCO BusinessEvents Components and Add-on Products](#) on page 10 for guidelines.

If your application do not use or need TIBCO DataGrid, clear the **TIBCO BusinessEvents Datagrid** option. In such case only the *In memory* functionality would be available in BusinessEvents.

- c) Click **Next**.
- d) A dialog appears where you can specify the location of a different Eclipse installation from the version provided with TIBCO BusinessEvents. Do one of the following.
  - Do not check the Use my own Eclipse installation check box. Just click **Next** to accept the provided Eclipse installation. (This is the recommended approach).
  - Check the **Use my own Eclipse installation** check box. Specify the location of your Eclipse installation in the Eclipse Installation Location field, and click **Next**. Also see [Existing Eclipse \(or TIBCO Business Studio\) Installation](#) for additional configuration required to use your own installation.
7. The installer performs some basic checks and if it finds any problems with the Eclipse configuration that you specified, it displays messages. If you are installing TIBCO BusinessEvents before your own copy of Eclipse, you can ignore the messages and continue the installation.
8. (Linux, Windows, macOS, and Solaris platforms only) If you are using the default installation profile or have selected **Oracle Elliptic Curve Cryptography Library** component in the customized installation, the Oracle Elliptic Curve Cryptography (ECC) ciphers are installed.
  - a) In the Oracle Elliptic Curve Cryptography Library LGPL License Agreement screen, review the terms of the license agreement and, if you agree to them, click **I accept the terms of the license agreement**. Then click **Next** to continue with the installation.

If you do not agree to the terms of the license agreement, click **Cancel** to exit from the installation process.

If you have performed installation before, using same installers with on-the-fly download option, the Oracle ECC ciphers are present in the assemblies folder. Thus, in such case, the installer do not prompts for the Oracle ECC cipher assembly download.

- b) In the LGPL Assembly Download Window, select either of the following option and click **Next**:
  - **Download Oracle Elliptic Curve Cryptography Library assembly from TIBCO** - To download the Oracle ECC assembly from TIBCO website.
  - **Provide the location for the assembly previously downloaded from TIBCO** - To provide the path of the downloaded TIBCO provided Oracle ECC assembly (product\_tibco\_sunec\_<version>\_<platform>). You can download the platform-specific Oracle ECC LGPL assembly from [http://public.tibco.com/pub/tibco\\_oss/sunec/](http://public.tibco.com/pub/tibco_oss/sunec/).
9. The installer configures your installation choices, then the Pre-Install Summary dialog displays. Review the information in the dialog and make sure that it is correct.
 

If you want to change any of your choices, click **Back** to step back through the dialogs to the appropriate point. You can then restart the installation process from that point.

If you are satisfied with your choices, click **Install**.

The installer now performs the necessary installation tasks.
10. You may be prompted to replace files already on disk that are newer than the installation files.
  - In the case of a fresh installation of the add-on over a prior fresh installation of a full installer version of the add-on or of TIBCO BusinessEvents, such messages are harmless: overwrite all existing files.
  - In the case of files you have changed: if you want to save settings in any existing files, first save a backup of the files to a different name, and then replace the original files with the newly installed files. After installation configure the newly installed files using information from the prior version's file backups, as needed.

11. When installation has completed, the Post Install Summary dialog displays. Click **Finish** to exit from the installer. There is a slight delay while the installer deletes temporary files.

## Installing in Console Mode

In console mode, the TIBCO Universal Installer is run from a command line.

### Procedure

1. Open the physical media or download the software package from <https://edelivery.tibco.com>.  
For downloading you will need your username and password. If you did not receive a username and password, contact TIBCO Technical Support.
2. Extract the contents of the package to a temporary directory.
3. Using a command line, navigate to the temporary directory to which you extracted the installation package.
4. Run the installer using this command line:
  - Microsoft Windows: `TIBCOUniversalInstaller.cmd -console`
  - Linux: `./TIBCOUniversalInstaller-platform_acronym.bin -console`
5. Respond to the messages on the command line.  
You may want to refer to [Installing in GUI Mode](#) for information about responding to the messages.
6. When the installation completes, press **Enter** to exit the installer.

## Installing in Silent Mode

In the silent mode, you can run the installer without user input by pointing the installer to an existing *response file*, which contains installation parameters.

A default response file is included with the product. Edit the file in a text editor and provide all non-default values as needed before launching the silent installation. For example, ensure that the `installationRoot` and `createNewEnvironment` attributes are set correctly. The default response file has the name:

`TIBCOUniversalInstaller.silent`

The best practice is to make a copy of the default response file, then edit that file and use it for the installation.

If you invoke the Universal Installer with only the `-silent` argument, the installer reads the input from default response file.

If you make a copy of the default response file, and rename it, you must provide the name of the response file when invoking the Universal Installer. This done by passing the following arguments on the command line:

```
-silent -V responseFile="filename.silent"
```

where, *filename* is the name you gave the response file.

### (Linux, Windows, macOS, and Solaris Platforms Only) Oracle ECC Library

If you want to use the ECC ciphers with SSL/TLS configurations, update the following entries in the response file:

- Set the entry to install Oracle ECC cipher with TIBCO BusinessEvents to true.
- ```
<entry key="feature_Oracle Elliptic Curve Cryptography Library_busessevents-enterprise">true</entry>
```

- Set the entry to accept the Oracle ECC LGPL.

```
<entry key="LGPLAssemblyLicenseAccepted">true</entry>
```

- Set entries for either of the following options:

- To download the Oracle ECC assembly from TIBCO website.

```
<entry key="LGPLAssemblyDownload">true</entry>
<entry key="LGPLAssemblyPath"></entry>
```

- To provide the path of the downloaded TIBCO provided Oracle ECC assembly (product\_tibco\_sunec\_<version>\_<platform>). You can download the platform-specific Oracle ECC LGPL assembly from [http://public.tibco.com/pub/tibco\\_oss/sunec/](http://public.tibco.com/pub/tibco_oss/sunec/).

```
<entry key="LGPLAssemblyDownload">false</entry>
<entry key="LGPLAssemblyPath">filePathToDownloadedPlugin</entry>
```

## Procedure

1. Open the physical media or download the software package from <https://edelivery.tibco.com>.  
For downloading you will need your username and password. If you did not receive a username and password, contact TIBCO Technical Support.
2. Extract the contents of the package to a temporary directory.
3. Navigate to the temporary directory to which you extracted the installation package.
4. Make a copy of the default response file, open the copy with a text editor, then update the parameters as needed.

The *response file* contains comments that describe each of the parameters. You can save the file using any desired name.

5. Enter the following command to start the installation (these assume you have copied the response file and saved it as `MyResponseFile.silent`):

- Microsoft Windows: `TIBCOUniversalInstaller.cmd -silent -VresponseFile="MyResponseFile.silent"`
- Linux: `TIBCOUniversalInstaller-platform_acronym.bin -silent -VresponseFile="MyResponseFile.silent"`

If you copy the response file to another directory, not the temporary directory containing the installer, you need to provide the absolute path of the response file.

A line like similar to the following is written to the installer log file when installation completes:

```
The installation has completed. Please check the log file for additional
information.
```

# Verifying the Installation

---

You can verify TIBCO BusinessEvents and TIBCO BusinessEvents add-on product installations after the installation is complete.

## Verifying TIBCO BusinessEvents Installation

To verify if the installation is successful, first check the file `tibco_universal_installer.userid_install.log`, which is located in the `.TIBCO` directory of the user performing the installation:

Errors in this file, or the existence of error files under this folder, indicates installation problems. Error files have the following format:

```
antTask_ERROR_log_post-install_mm-dd-yyy.n.log
```

If the log files do not indicate any errors, then open a simple example project in TIBCO BusinessEvents Studio, and also run the example at the command line. The example readme files explain how to run the examples at the command line, from the installed location. Check for errors on the command line or user interface. Absence of errors, and a normal engine startup indicate successful installation.

## Verifying Add-On Product Installations

To verify that add-ons are installed, look for the list of add-ons in the folder `TIBCO_HOME/_installInfo`. Every successfully installed add-on has a corresponding XML file under this folder.

You can also check the install log file to confirm which add-ons are installed.

# Uninstalling TIBCO BusinessEvents

In the case of a service pack release, this procedure uninstalls the entire TIBCO BusinessEvents installation, not just the service pack. It is not possible to uninstall only the service pack.

## Uninstall in GUI mode

To uninstall TIBCO BusinessEvents in the GUI mode, do the following:

### Procedure

1. Do one of the following to start the uninstaller:
  - Navigate to the `TIBCO_HOME/tools/universal_installer` directory and run the `TIBCOUniversalInstaller` program.
  - (Windows) From the Start menu, select **Start > All Programs > TIBCO > TIBCO\_HOME > Uninstall**.
  - (Windows) Use Add/Remove Programs from the Control Panel.
2. The Welcome screen appears. Click **Next**.
3. Do one of the following:
  - To uninstall only a selection of products in this TIBCO home, click **Custom Uninstall**. Select the product or products you want to uninstall. Then click **Next**. See [TIBCO BusinessEvents® Enterprise Edition Components](#) on page 10 for guidelines.
  - To uninstall all TIBCO products in this TIBCO home (that were installed using the universal installer), click **Typical Uninstall**. Then click **Next**.
4. The Pre-Uninstall Summary screen appears. Click **Uninstall**. Uninstallation proceeds and then you see the Post-Uninstall Summary.
5. Click **Finish** to close the uninstaller window.
6. If you are prompted to do so, restart the computer.
 

You may also want to manually delete any remaining files in the installation directory to completely remove the product.

### Result

For information on the uninstallation log files, see [Installation History Log Files](#).

## Uninstall in Console Mode

To uninstall TIBCO BusinessEvents in the console mode, do the following:

### Procedure

1. Open a console window and navigate to the directory:
 

```
TIBCO_HOME/tools/universal_installer
```
2. Run the `TIBCOUniversalInstaller` in console mode using the command:
 

```
TIBCOUniversalInstaller -console
```
3. Respond to the prompts on the console window to uninstall the software.

## Uninstalling in Silent Mode

Uninstalling in silent mode allows you to uninstall without user inputs by pointing to a *response file*. For uninstallation, you need to create a response (.silent) file with the needed uninstallation parameters. You can use the .SILENT file provided with the installation package as a template.

Use the **-silent** command for performing the silent uninstallation. Pass the absolute path of the response file as an argument if the response file is not located in the same folder as TIBCOUniversalInstaller.

### Prerequisites

A .SILENT file should exist with values for atleast the following attributes:

- **uninstallProductID**
- **uninstallProductVersion**
- **uninstallTIBCOHome**

### Procedure

1. Open a command line, navigate to the directory:  
`TIBCO_HOME/tools/universal_installer`
2. Run the TIBCOUniversalInstaller in silent mode using the following command based on the response file location:

| Response File Location                            | Silent Uninstallation Command                                                                                 |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------|
| <code>TIBCO_HOME/tools/universal_installer</code> | <code>TIBCOUniversalInstaller -silent</code>                                                                  |
| Other                                             | <code>TIBCOUniversalInstaller -silent -V<br/>responseFile="<i>&lt;absolute_path_and_file_name&gt;</i>"</code> |

The following sample content of the Uninstall.silent file removes all products from the specified `TIBCO_HOME`: `C:\BE\BE520`.

```
<?xml version="1.0"?>
<!DOCTYPE properties SYSTEM "http://java.sun.com/dtd/properties.dtd">
<properties>
<comment>---Universal Installer Silent Installation Properties---</comment>

<entry key="uninstallProductID">*</entry>
<entry key="uninstallProductVersion">*</entry>
<entry key="uninstallTIBCOHome">C:\BE\BE520</entry>

</properties>
```

## Existing Eclipse (or TIBCO Business Studio) Installation

This section is optional, for those using an existing eclipse installation instead of one provided with TIBCO BusinessEvents.

Using an existing Eclipse (or TIBCO Business Studio) installation is possible only for releases with full installers. It is not possible for releases with partial installers, such as service pack releases.

TIBCO BusinessEvents Studio is compatible with the Eclipse P2 provisioning system. You can choose to install TIBCO BusinessEvents Studio on an existing Eclipse installation using one of the following approaches:

- Executing the script `install_studio_repo` available at `BE_HOME/studio/repo`. See [Install Using the Script `install\_studio\_repo`](#) for details.
- Using Ant to run the build file available at `BE_HOME/studio/repo`. See [Install Using Ant](#) for details.
- Copying the links and updating the `.ini` files manually. This is applicable only when installing on an existing basic Eclipse installation and not on TIBCO Business Studio. See [Install Manually by Copying Links and Updating `.ini` Files](#) for details.

## Eclipse Requirements

TIBCO recommends using the Eclipse software bundled with the TIBCO BusinessEvents software. However, if you prefer to use your existing Eclipse software installation, or want to install Eclipse separately, or want to install TIBCO BusinessEvents for use with the TIBCO Business Studio business modeling software product, you must update the existing Eclipse installation with the required plug-ins. You can do this before or after installing TIBCO BusinessEvents.

The Eclipse requirements are:

- Eclipse release 4.5.2
- Eclipse Delta Pack 4.5.1
- Eclipse Modeling Framework (EMF) release 2.11.1
- EMF Transaction 1.9.0
- EMF Validation 1.9.0
- Eclipse Graphical Editing Framework (GEF) release 3.10.0
- Eclipse Process Framework (EPF) Richtext Feature release 1.5.1.6
- Model Development Tools (MDT) UML release 5.1.0
- Eclipse Web Tools Platform (WTP) release 3.6.0

## Eclipse Installation

Perform the following tasks to ensure that the dependencies required by Eclipse and TIBCO BusinessEvents are installed and available:

### Procedure

1. Download the files listed in [Eclipse Requirements](#) from the Eclipse Foundation website.  
This step is optional if the script `install_studio_repo` is used as described in [Install Using the Script `install\_studio\_repo`](#).
2. If you have not already done so, install the Eclipse release.
3. Extract the other components (Delta Pack, EMF, GEF, MDT, and WTP) to the top-level directory of your Eclipse installation.

4. Install TIBCO BusinessEvents (and one or more add-on products if required) as explained in [Installing TIBCO BusinessEvents](#). Remember to select the **Use my own Eclipse installation** check box.

The TIBCO BusinessEvents products can be installed before installing the Eclipse software. Ensure that all of them are installed before proceeding to the next step.

5. Choose one of the following approaches to install TIBCO BusinessEvents Studio:

- [Install Using the Script install\\_studio\\_repo](#)
- [Install Using Ant](#)
- [Install Manually by Copying Links and Updating .ini Files](#)

## Install Using the Script install\_studio\_repo

This option is available only if the Eclipse Platform feature is installed when installing TIBCO BusinessEvents. If the Eclipse Platform feature is not installed, you can use Ant to install TIBCO BusinessEvents Studio as described in [Install Using Ant](#).

When you install TIBCO BusinessEvents (and one or more add-ons), the TIBCO BusinessEvents Studio repositories are installed under `BE_HOME/studio/repo`. For each of the installed products, a folder with the product name is created under `BE_HOME/studio/repo`.

Scripts are provided with the repositories to install on an existing Eclipse installation.

### Procedure

1. Using a console window, navigate to `BE_HOME/studio/repo` and run the following command (on Windows):

```
install_studio_repo.bat <absolutePathOf_YourEclipse>/eclipse.exe
```

2. The script performs the following tasks:

- installs the TIBCO BusinessEvents Studio repositories for all the installed products.
- checks if the dependencies are available. If they are not available, the script downloads the dependencies from the Eclipse download site.

If the dependencies are not available, you must ensure that the machine has network connectivity to enable the script to download the required files. This may take a while to complete.

- Updates the following properties in `Your_Eclipse/eclipse.ini` file:

```
-DBE_HOME=path to BE_HOME
```

```
-Dstudio.wrapper.tra.file=<path to BE_HOME>/studio/eclipse/configuration/  
studio.tra
```

```
-DJDK_LIB=TIBCO_JAVA_HOME/lib
```

The script uses JRE 1.8 that is provided with TIBCO BusinessEvents. To use a different JDK, edit the property `DJDK_LIB` and specify the absolute path of the JDK that is to be used.

The script throws an error with an appropriate message if the Eclipse executable or the `eclipse.ini` files are missing.

3. Once the execution is completed, start Eclipse and open the BusinessEvents Perspective to access the TIBCO BusinessEvents Studio features.

## Install Using Ant

This option does not require the Eclipse Platform feature to be installed when installing TIBCO BusinessEvents. Ensure that Ant is installed and available in your environment.

### Procedure

1. Install TIBCO BusinessEvents Studio on an existing Eclipse installation by executing the command:  

```
ant -buildfile install_studio_repo.xml -DappBinary=<absolutePathOf_YourEclipse>/eclipse.exe -DappIni=<absolutePathOf_YourEclipse>/eclipse.ini
```
2. The script performs the tasks described in [Install Using the Script install\\_studio\\_repo](#).
3. Once the execution is completed, start Eclipse and open the BusinessEvents Perspective to access the TIBCO BusinessEvents Studio features.

## Install Manually by Copying Links and Updating .ini Files

This approach can be used to install on any existing standard Eclipse installation only.

This approach does not support installing TIBCO BusinessEvents Studio on TIBCO Business Studio.

### Procedure

1. Copy the files `TIBCOBusinessEvents-Studio-plugins.link` and `TIBCOBusinessEvents-EclipsePlatform-plugins.link` from `BE_HOME/studio/eclipse/dropins_configuration` to `Your_Eclipse/links`.
2. Configure the `Your_Eclipse/eclipse.ini` file as follows:

- Ensure that the VM setting is done for Java 1.8 JVM. Path should appear in a new line:

```
-vm
```

```
path to JRE 1.8
```

- Add the following properties to `-vmargs`, each on a new line

```
-DBE_HOME=path to BE_HOME
```

```
-Dstudio.wrapper.tra.file=<path to BE_HOME>/studio/eclipse/configuration/  
studio.tra
```

```
-DJDK_LIB=path to JRE 1.8/lib
```

3. Change directory to the `Your_Eclipse` location and run the command:

```
eclipse -clean -initialize
```

4. Run the command `eclipse`.

Running this command loads Eclipse with the BusinessEvents Studio plug-ins.

## Post Installation Tasks

This chapter explains some post-installation steps you may have to perform in your installation.

Also see [Migrating Projects from Earlier Versions](#) for additional procedures you may have to do after installation.

### Post Installation Tasks for All Platforms

This section explains changes that are required in the circumstances shown.

Also see [JVM Settings in Properties Files](#) in case it pertains to your situation.

### Migrating Projects

For all projects created using prior releases, you must perform migration steps. After you migrate, you must also rebuild the EAR files for the projects, as is always the case when you upgrade. See [Migrating Projects from Earlier Versions](#) and carefully follow all instructions.

## Re-Initialize Studio Plug-ins Registry after Add-on Software Installation

When you install add-on products after installing TIBCO BusinessEvents, you need to ensure that the correct plug-ins contributed by the add-ons are initialized. To do this, re-initialize the studio plug-ins registry before you start using TIBCO BusinessEvents Studio, as explained next.

### Procedure

1. To re-initialize Studio plug-ins, open a command prompt.
2. Change directory to `BE_HOME/studio/eclipse`.
3. Run the command

```
studio -clean -initialize
```

## JVM Settings in Properties Files

This task is required for full installations. It is not typically required for service pack installations. It is valid on all platforms.

Check the engine properties file to ensure that all settings are appropriate for your platform.

### Set the Heap Size as Needed

By default, the initial (`-Xms`) and maximum (`-Xmx`) heap size are set to 1GB for both TIBCO BusinessEvents and TIBCO BusinessEvents Decision Manager. Change the settings as needed to meet your requirements. For TIBCO BusinessEvents, the settings are in the `BE_HOME/bin/be-engine.tra` file. For TIBCO BusinessEvents Decision Manager they are in the `BE_HOME/decisionmanager/eclipse/DecisionManager.ini` file.

You can also set the stack size for each thread using the `-Xss` option.

For example, if you want to run both TIBCO BusinessEvents Decision Manager and TIBCO BusinessEvents on a machine with 1GB memory, you might reduce the initial heap size setting (`-Xms`):

```
java.extended.properties=-server -Xms512m -Xmx1024m -Xss2m
```

As another example, if you use a machine with more memory, and you work with very large tables in TIBCO BusinessEvents Decision Manager, you might increase the TIBCO BusinessEvents Decision Manager heap size accordingly.

It can also be helpful to set the MaxPermSize as follows:

```
-XX:MaxPermSize=128m
```

### Platform-Specific Settings

Some of the JVM settings do not work for all platforms, and some platforms use additional, platform-specific parameters. For example:

For 64 bit Sun JVM for Intel or AMD on Linux, use

```
JVM_LIB_PATH=%TIB_JAVA_HOME%/lib/amd64/server/libjvm.so
```

For 64 bit Sun JVM for Intel or AMD on Windows, use:

```
JVM_LIB_PATH=%TIB_JAVA_HOME%/lib/amd64/server/libjvm.dll
```

For AMD on Windows and 32 bit Sun JVM for Intel use:

```
JVM_LIB_PATH=%TIB_JAVA_HOME%/lib/i386/server/libjvm.dll
```

The IBM AIX platform uses parameters common to all JVMs, but does not use the `-d64` parameter. AIX also uses additional parameters (using the format, `-Xparameter`).

Refer to the appropriate JVM reference manuals for the platform in question. For example, for AIX you could refer to the following resources.

<http://www.ibm.com/developerworks/java/jdk/aix/j564/sdkguide.aix64.html>

<http://www.ibm.com/developerworks/java/jdk/aix/j532/sdkguide.aix32.html>

Note that on AIX, you can determine the mode in which JVM is running using the following simple Java program:

```
System.getProperty("com.ibm.vm.bitmode");
```

It returns the following values:

```
* 32 - the JVM is running in 32-bit mode
* 64 - the JVM is running in 64-bit mode
```

## Software Configurations Required for the Mac OS Platform

In the MacOS platform, TIBCO BusinessEvents Studio and TIBCO BusinessEvents Decision Manager add-on requires Java 6 for launching. If you do not want to install Java 6, you can use some workaround to launch `Studio.app` and `Decisionmanager.app` applications.

You can use either of these workarounds

- You can launch `Studio.app` and `Decisionmanager.app` using binary executable files present at the following locations:

- `BE_HOME/studio/eclipse/studio.app/Contents/MacOS/`
- `BE_HOME/decisionmanager/eclipse/decisionmanager.app/Contents/MacOS/`

- If you want to directly run `Studio.app` and `Decisionmanager.app`, you can edit the JDK installation file to update the JVMCapabilities dictionary. The JDK installation file is located at `/Library/Java/JavaVirtualMachines/jdk1.8.0_x.jdk/Contents/Info.plist`. Update the JVMCapabilities dictionary with the following values:

```
<key>JVMCapabilities</key>
<array>
<string>CommandLine</string>
<string>JNI</string>
<string>BundledApp</string>
<string>WebStart</string>
<string>Applets</string>
</array>
```

## All UNIX Installations — Directory Permissions

- This task is required for full installations. It is not typically required for service pack installations.
- This step is required on all UNIX platforms.
- If you use TIBCO BusinessEvents Decision Manager, refer to its installation guide for additional actions.

This section explains what directory permissions must be set to enable users to use the system.

### Permissions for TIBCO BusinessEvents Directories

All TIBCO BusinessEvents users must have read, write, and execute permissions for the following directories:

```
bin Directory
$TIBCO_HOME/be/<version_number>/bin
```

For example, if TIBCO BusinessEvents has been installed in `/opt/tibco`, the user who installed TIBCO BusinessEvents should execute the following commands:

```
% chmod 755 /opt/tibco/be/<version_number>/bin/
```

(Other changes can be made using the `chown` command as needed.)

You can verify ownership and permissions using the long listing command, `ls -l`.

## Configuration for 64-bit Mode

The following platforms allow you to run TIBCO BusinessEvents in 64-bit mode. See the product readme for versions supported:

- AIX
- HP-UX Itanium
- Linux
- Solaris 10 SPARC
- Solaris 10 X86

An additional step is required for the HP-UX platforms. See [Configure for HP-UX](#) ). For Microsoft Windows, a 64-bit installer is available from the download site.

## Configure for 64-bit Mode

### Procedure

1. Open all TRA files for editing. Do this for TIBCO BusinessEvents and for each add-on product used:

```
BE_HOME/bin/be-engine.tra
```

```
BE_HOME/bin/be-jdbcdeploy.tra
```

```
BE_HOME/bin/be-migration.tra
```

```
BE_HOME/mm/bin/be-mm.tra
```

```
BE_HOME/rms/bin/be-rms.tra
```

```
BE_HOME/views/bin/be-views.tra
```

(`be-rms.tra` is used with TIBCO BusinessEvents Decision Manager and `be-views.tra` is used with TIBCO BusinessEvents Views).

2. To increase the heap size used by the engine, in each TRA file modify the values of `-Xms` and `-Xmx` in the `java.extended.properties` parameter. For example, some common values are as follows:  
`-d64 -XX:MinHeapFreeRatio=52 -XX:MaxHeapFreeRatio=90 -XX:GCTimeRatio=19 -Xms1024m -Xmx1024m -javaagent:%BE_HOME%/lib/cep-base.jar -XX:MaxPermSize=256m -XX:+UseParNewGC -XX:+UseConcMarkSweepGC`
3. Modify `%BE_HOME%/bin/be-engine.tra`.
4. Append `%RV_HOME%/lib/64` to `tibco.env.LD_LIBRARY_PATH`.
  - Alternatively, you can run as root:
    - a) Edit `/etc/ld.so.conf`.
    - b) Add the actual path `%RV_HOME%/lib/64`.
    - c) Run `ldconfig`.

If you do not perform steps 3 and 4, an error similar to the following might occur when you start the application: `java.lang.UnsatisfiedLinkError:/opt/tibco/tibrv/8.3/lib/libtibrvjsd64.so:libssl.so.0.9.8:wrongELF class: ELFCLASS32.`

## Configure for HP-UX

If you are using an HP-UX platform:

### Procedure

1. Open the `be-engine.tra` file.
2. Remove the following entry from the property `java.extended.properties` property:  
`-javaagent:%BE_HOME%/lib/cep-instrumentation.jar`  
 (If this property is present, the executable fails to launch.)

## Enabling 64-bit Properties

By default, the 32-bit `java.extended.properties` are enabled.

Comment the 32-bit `java.extended.properties` and enable the 64-bit `java.extended.properties` in the TRA files in these folders:

```
BE_HOME/bin/be-engine.tra
BE_HOME/mm/bin/be-mm.tra
BE_HOME/rms/bin/be-rms.tra
```

## Adding Installation or Build Script for OpenSSL for Tomcat

You need to add installation or build script for Windows and Linux (Debian and Red Hat) for OpenSSL for Tomcat, which will provide SSL support for the HTTP channel, when the Identity Resource is of the type Certificate/KeyURL.

- Procedure mention in this section are not mandatory for TIBCO BusinessEvents installation. Use this information, only when you need to enable Open SSL for Tomcat.
- Tomcat Native 1.1.32 or 1.1.33 and OpenSSL 1.0.2 onwards are required to build libraries, which are compatible with Tomcat 7.0.62 onwards.

## Setting Up OpenSSL on Windows

### Procedure

1. Save the `tcnative-1.dll` file in a directory. The file can be found under `TOMCAT_HOME\bin` in the Tomcat installation. You can download Tomcat from the following URL:

<http://archive.apache.org/dist/tomcat/tomcat-7/v7.0.64/bin/>

2. Provide the path to this directory in the TRA file using the `java.library.path` property.

```
java.library.path=<dllDirectoryPath>
```

## Setting Up OpenSSL on Linux (Debian & Red Hat)

### Procedure

1. Install Apache Portable Runtime (APR) and OpenSSL. OpenSSL is already available in most linux setups.

For Debian based Linux use the following command:

```
apt-get install build-essential libapr1-dev libssl-dev
```

For Red Hat, download source (the `.tar.gz` file) for APR from <http://apr.apache.org/download.cgi>  
Now run the following commands:

```
tar xvzf apr-1.5.1.tar.gz
cd apr-1.5.1
./configure
make
make install
```

2. Note down the path shown at the end of the command `make install`. This directory contains the `apr-1-CONFIG` file, which is used for building the Tomcat native library.
3. To build Tomcat native library, extract `tomcat-native.tar.gz`, which is located under `TOMCAT_HOME/bin/tomcat-native.tar.gz`, to a local directory (for example, `home/user/tomnative`). You can download Tomcat from the following URL:

<http://archive.apache.org/dist/tomcat/tomcat-7/v7.0.64/bin/>

4. Browse to the native library in the extracted directory (for example, `home/user/tomnative/tomcat-native-1.1.32-src/jni/native`) and run the following commands:

```
/configure -with-apr=1-CONFIG> -with-java-home= -with-ssl=yes -
prefix=destinationDirectoryForLibrariesInstallation
make
make install
```

To verify if the installation is successful, browse to the destination directory provided for libraries installation and check if it contains five new files (with `.so`, `.la` and `.a` extensions).

5. Provide the path of the destination directory provided for libraries installation in the TRA file.

```
LD_LIBRARY_PATH= destinationDirectoryForLibrariesInstallation
export LD_LIBRARY_PATH
```

## Installing the Language Pack for TIBCO BusinessEvents WebStudio Classic UI

By default, the TIBCO BusinessEvents WebStudio classic UI is available in American English (en\_US). You can make it available in other languages by installing the TIBCO WebStudio Language Pack, which is available on the TIBCO software product download website.

All language packs are installed at *BE\_HOME/rms/lib/locales* directory in JAR file format. English language file (en\_US.jar) is installed with the product. Do not remove this default file.

In each language pack, *<language\_country>.jar* is bundled and inside the JAR file there are also seven localized resource files as *filename\_<language\_country>.properties*.

The country code is optional.

### Procedure

1. Download the supported language packs from the TIBCO software product download site.  
You can download the following language packs for TIBCO BusinessEvents WebStudio:

| Language           | Downloadable Archive                                                   |
|--------------------|------------------------------------------------------------------------|
| Arabic             | TIB_businessevents-standard-lp_<version_number>_languagepack-ar.zip    |
| German             | TIB_businessevents-standard-lp_<version_number>_languagepack-de.zip    |
| French             | TIB_businessevents-standard-lp_<version_number>_languagepack-fr.zip    |
| Italian            | TIB_businessevents-standard-lp_<version_number>_languagepack-it.zip    |
| Korean             | TIB_businessevents-standard-lp_<version_number>_languagepack-ko.zip    |
| Simplified Chinese | TIB_businessevents-standard-lp_<version_number>_languagepack-zh_CN.zip |

2. Unzip the downloaded language packs and put the *<language\_country>.jar* file in the *BE\_HOME/rms/lib/locales* directory.
3. Restart the RMS server.

# Migrating Projects from Earlier Versions

Read this chapter carefully and follow all migration steps that apply to your case.

For non-project related actions required for various situations, see [Post Installation Tasks](#).

Migration of add-on products is also included, so that all migration information is available in one place.

Many of the actions you must take to migrate projects to the current release depend on the version you are migrating from, and the features you use. Some manual steps are required. More manual steps are required for earlier versions than for 4.x projects due to the changes in architecture.

Read the rest of this section and then check the section for the release from which you are migrating:

- If you are upgrading from 5.0 to 5.1, the CDD model needs to be refreshed. See [Migration from 5.0 to 5.1](#) for details.
- If you are upgrading from 4.0, first upgrade to 4.0.1 and then migrate to 5.1. See [Migration of 4.x Projects](#), and referenced sections.
- If you are upgrading from 3.x, you can migrate directly to 5.0 and then to 5.1. Follow the manual steps as required. See [Migration of 3.x Projects](#), and referenced sections.
- If you are upgrading from a version earlier than 3.0, first upgrade to the latest 3.x version, following directions in the 3.x documentation.

No migration steps are required for JDBC backing store implementations or data. JDBC backing store was first made available in 3.0.1 Hotfix 6.

## Check Release Notes

In all cases, check all sections in the Release Notes of the product, available at <https://docs.tibco.com>, and take action accordingly.

## Migrating from Coherence to TIBCO BusinessEvents DataGrid Cache Provider

TIBCO DataGrid cache provider feature replaces Coherence as the built-in cache provider in version 5.0.0. A set of core Coherence functions has been renamed (and additional internal changes have been made) so that these functions can be used with either the Coherence or the TIBCO BusinessEvents DataGrid cache provider. The renamed functions are in the Standard catalog `Cluster.DataGrid` category.

See [Mapping of Coherence Functions to TIBCO BusinessEvents DataGrid Functions](#) for details.

When you migrate to the current release with TIBCO BusinessEvents DataGrid as the cache provider, certain Coherence functions are not migrated. In particular, the functions in the following categories are not migrated:

- Standard/Coherence/Constants
- Standard/Coherence/Extractors
- Standard/Coherence/Filters
- Standard/Coherence/Query

If you are concerned that your projects may require some recoding, contact your TIBCO representative for more details.

A TIBCO BusinessEvents Studio refactoring operation, and a TIBCO BusinessEvents Studio Tools command line option are available to do the function migration for specific purposes other than general migration.

## Fixing Errors Due to Use of Words in Reserved Word List

As TIBCO BusinessEvents develops, the number of reserved words increases. For the current list of reserved words, refer to Rule Language Grammar as well as Keywords and Other Reserved Words in TIBCO BusinessEvents Developer's Guide.

Validation shows errors for use of keywords as identifiers:

Reserved keyword, cannot be used as an identifier

### To Resolve the Issue

If you use any of the listed words as identifiers, resource names, or folder names, change them in your project.

## Migrating with Berkeley DB Object Management

Berkeley DB OM, formerly called Persistence OM, is an older form of data persistence. Support for this option is removed in version 5.1.

You can migrate to Cache OM with backing store.

There is no direct migration path from the Berkeley DB OM database to a JDBC backing store. Migration is a two-stage procedure:

### Procedure

1. As needed, upgrade using the latest 3.x or 4.x version of TIBCO BusinessEvents. Those versions have a utility to migrate the data to the legacy backing store schema, the Oracle Types backing store schema.
2. Migrate from the Berkeley DB database to the legacy Oracle Types backing store. To complete this step, follow instructions in the TIBCO BusinessEvents Installation guide for the version you are using for this step of the migration.
3. Migrate from the Oracle Types backing store to the JDBC backing store, following instructions in [Oracle Types to JDBC Backing Store Migration](#).
4. Migrate the project to 5.1.
  - If you are using the latest 5.x version, see [Migration from 5.0 to 5.1](#).
  - If you are using the latest 4.x version, see [Migration of 4.x Projects](#).
  - If you are using the latest 3.x version, see [Migration of 3.x Projects](#).

## Migration from 5.0 to 5.1

This section provides information about the manual tasks that need to be performed when migrating from 5.0 to 5.1. See [Migration from 4.x to 5.1](#) if you are migration older projects to 5.1.

### Changes to the CDD File

Import your project into a 5.1 workspace and edit the CDD file to remove the newly added element `<enabled>>false</enabled>` from under the backing store entries for the cluster tab.

Entries related to the load balancer and process-groups can remain as is.

## Migration from 5.0 to 5.1 for Add-on Products

In addition to migration content for TIBCO BusinessEvents, migration of add-on products is documented in this chapter for your convenience.

### TIBCO BusinessEvents Views

- Automatic Changes

#### Migrates About This Chart text

The About this Chart property has been removed from charts. When projects from the prior release are migrated to the current release, the text from those properties is appended to the chart description.

- Manual Changes

#### Changes to Logo Image and Branding Image Handling

The method of including branding images has been improved. Images are now stored in the TIBCO BusinessEvents Studio project. To migrate to the new method do the following.

- Open the project in TIBCO BusinessEvents Studio, and select **File > Import > File System**. Use the Eclipse dialog to locate the image file or files you want to use, and import them into a project folder. `/Dashboards/Images` is the recommended location.
- Edit the Login and Header resources. In the ImageURL field, browse to the project folder where the imported graphic is located and select it.

## Migration from 4.x to 5.1

All changes listed in the section [Migration from 5.0 to 5.1](#) need to be performed in addition to the changes described below.

### Manual Change

When migrating 4.x projects, edit the CDD file and set the cluster level property `be.engine.cluster.as.discover.url` with a valid value (for example, `tibpgm://9995/`) preferably inside a property group "tibas".

No migration steps are required for JDBC backing store implementation or data

### Automatic Changes

The migration utility automatically does the following:

#### Migrates core Coherence functions to product neutral ones

A set of core Coherence functions has been renamed so that these functions can be used with either the Coherence or the TIBCO BusinessEvents DataGrid cache provider. Not all Coherence functions are migrated. See [Migrating from Coherence to TIBCO BusinessEvents DataGrid Cache Provider](#) for important information.

#### Migrates the channel driver type

Driver type is migrated from the 4.0 format to the current format.

#### Migrates HTTP channel settings

HTTP channel tuning settings are now maintained in the channel resource instead of the processing unit (PU) area of the CDD. During the migration process, you specify the CDD and within it the PU whose settings you want to migrate. Settings from the selected PU are applied to all HTTP channels.

### **Migrates CDD file namespaces**

Namespace is changed to the following: <http://tibco.com/businessesvents/configuration/5.1>.

### **Migrates entity metadata properties to CDD domain object override settings**

In earlier versions, entity-specific configuration for cache and backing store was done using metadata properties (also known as extended properties). It is now done in the CDD only. The migration utility moves all relevant metadata property settings to the equivalent settings in the CDD Domain Objects Overrides area. An override is added for each entity type. You can later remove unnecessary entries as needed. (There is no change to configuration for metadata properties used by the TIBCO BusinessEvents Data Modeling add-on product.)

### **Migrates localStorage Property to isSeeder property (partial migration)**

The property `tangosol.coherence.distributed.localstorage` is migrated to the cache-provider-neutral property `be.engine.cluster.isSeeder`. However, a change in design makes this property redundant. Cache storage is now set at the processing unit level, using a checkbox labeled **Enable Cache Storage**. It is not possible to set this checkbox at migration time. Note that without further action, if the `isSeeder` property is set higher in the order of precedence than the processing unit, then the `isSeeder` property is used at runtime. However, if the `isSeeder` property is set lower in the order of precedence than the processing unit, then the checkbox value is used. To complete migration, remove the `isSeeder` property and instead use the processing unit setting **Enable Cache Storage** in the project CDD file. Note that enabling cache storage on non-cache agents is not recommended for production. It can be useful for testing and demonstration purposes.

### **Site Topology, TIBCO BusinessEvents Version Field**

The value of the TIBCO BusinessEvents Version field in Cluster Settings and in Host Settings is updated to the current version.

### **Adds CDD properties for TIBCO BusinessEvents Monitoring and Management authentication**

, which is a new feature in 5.0. The properties are added in these locations:

- `BE_HOME/mm/project/emonitor > MM.cdd > mm-class agent class > properties > mm/auth property group`
- `ToBeMonitored_Project > project.cdd > Cluster properties > auth property group.`

The properties are added to all project CDDs if a project has more than one. The following properties are added, with the default values as shown:

```
be.mm.auth.type=file
be.mm.auth.file.location=BE_HOME/mm/config/users.pwd
java.security.auth.login.config=BE_HOME/mm/config/jaas-config.config
```

## **Add-on Product Migration**

### **Migrates TIBCO BusinessEvents Views default skin**

TIBCO BusinessEvents Views has a new look-and-feel. The default skin is migrated automatically. If you use this add-on product, you can view the default skin settings using the view-only System Elements resource. See TIBCO BusinessEvents Views Developer's Guide for details about how you can use the System Elements when you define your own color schemes and skins.

### **Migrates TIBCO BusinessEvents Decision Manager metadata location**

Metadata information for decision tables was being stored in the (internal) `.beproject` file. Now it is stored in the decision table file itself.

### Mapping of Coherence Functions to TIBCO BusinessEvents DataGrid Functions

| 4.x Coherence Category Function Name | DataGrid Category Function Name  |
|--------------------------------------|----------------------------------|
| C_CacheGetEntityById()               | CacheGetEntityById()             |
| C_CacheLoadConceptByExtId()          | CacheLoadConceptByExtId()        |
| C_CacheLoadConceptById()             | CacheLoadConceptById()           |
| C_CacheLoadConceptIndexedByExtId()   | CacheLoadConceptIndexedByExtId() |
| C_CacheLoadConceptsByExtId()         | CacheLoadConceptsByExtId()       |
| C_CacheLoadEntity()                  | CacheLoadEntity()                |
| C_CacheLoadEventByExtId()            | CacheLoadEventByExtId()          |
| C_CacheLoadEventById()               | CacheLoadEventById()             |
| C_CacheLoadParent()                  | CacheLoadParent()                |
| C_CacheName()                        | CacheName()                      |
| C_CacheReevaluate()                  | CacheReevaluate()                |
| C_ClassName()                        | ClassName()                      |
| C_EnableCacheUpdate()                | EnableCacheUpdate()              |
| C_Index()                            | Index()                          |
| C_Lock()                             | Lock()                           |
| C_TransactionProperties              | TransactionProperties()          |
| C_UnLock()                           | UnLock()                         |

## Migration of 4.x Projects

This section outlines how to migrate 4.x projects, after you install TIBCO BusinessEvents 5.2.

Berkeley DB object management is removed from the product in version 5.1. If you are migrating from Berkeley DB, see [Migrating with Berkeley DB Object Management](#) for preliminary steps to take in order to change to Cache OM.

### First Upgrade 4.0.0 Projects to 4.0.1

If you are running 4.0.0, first upgrade to 4.0.1. Open the 4.0.0 projects in TIBCO BusinessEvents Studio and save them.

## Importing Projects in TIBCO BusinessEvents Studio

A command line utility to do the same actions is also provided. After importing using the command line utility an additional procedure is required before you can work with the project in TIBCO BusinessEvents Studio.

See [Import an Existing 4.x Project at the Command Line](#). For details about what is migrated, see [Migration from 4.x to 5.1](#).

### Procedure

1. After installing TIBCO BusinessEvents 5.2, start TIBCO BusinessEvents Studio using a different workspace from the workspace containing the 4.x projects.
2. Select **File > Import** .  
The Import wizard is displayed.
3. In the Import wizard, select **TIBCO BusinessEvents > Existing TIBCO BusinessEvents Studio Project** and click **Next**.  
The Existing TIBCO BusinessEvents Studio Project Import Wizard is displayed.
4. In the **Existing project root directory** field, click **Browse** and select the project root directory of the project you are importing.
5. Select the XPath version to be used for the project in the **XPath Version** drop-down.
6. Do one of the following:
  - Select the **Copy project into workspace** checkbox. This option copies the project into your current workspace.
  - Clear the **Copy project into workspace** checkbox and specify an import location.
7. Do one of the following:
  - If your project has no HTTP channels, click **Finish** (this is the only option).
  - If your project has one or more HTTP channels, click **Next**.
8. If you clicked **Next** then in the Select Processing Unit window select the project CDD in the **Cluster Deployment Descriptor** drop-down.
9. Select the processing unit in the **Processing Unit** drop-down that contains the HTTP properties to be migrated.  
An informational panel displays the settings that will be migrated.
10. Click **Finish**.  
The imported project is displayed in the TIBCO BusinessEvents Studio.

## TIBCO BusinessEvents Views CDD Change

If you use the TIBCO BusinessEvents Views add-on product, you may need to update the CDD for changes to the following dashboard agent properties:

| 4.x Property                 | 5.x Property                                                                                       |
|------------------------------|----------------------------------------------------------------------------------------------------|
| <code>be.http.docRoot</code> | <code>be.agent.dashboard.http.docroot</code><br>The default is <code>BE_HOME/views/web-root</code> |
| <code>be.http.docPage</code> | <code>be.agent.dashboard.http.docpage</code><br>The default value is <code>index.html</code>       |

Because the replacement properties now have default values, you only have to add the properties if you need to set a non-default value.

Do the following depending on your use case:

- If you have not changed the provided 4.x property values, and do not need to use a non-default value in 5.1, remove the 4.x properties from the CDD.
- If you changed the value for one or both of the above properties, rename the property or properties to the 5.1 name (as shown above). Do this in the dashboard agent properties area of the CDD, for all affected dashboard agents (or at a higher level as appropriate to the scope you want to use).

## Cache Provider Selection (Cache OM only)

Beginning with TIBCO BusinessEvents 5.0.0, Oracle Coherence is no longer provided with TIBCO BusinessEvents. An internal component, TIBCO BusinessEvents DataGrid, is used by default.

See [Migrating from Coherence to TIBCO BusinessEvents DataGrid Cache Provider](#) for important information about migration of Coherence functions. If you use cache OM, action is required:

- If you want to switch from Oracle Coherence to TIBCO BusinessEvents DataGrid, you must manually reconfigure the CDD file settings. See *TIBCO BusinessEvents Configuration Guide* for details.
- If you want to continue using Oracle Coherence as the cache provider, you must acquire a licensed copy of Oracle Coherence software and do some configuration. See *TIBCO BusinessEvents Configuration Guide* for details on enabling use of Oracle Coherence as the cache provider.
- The property `tangosol.coherence.distributed.localstorage` is migrated automatically to the cache-provider-neutral property `be.engine.cluster.isSeeder`. However, a change in design makes this property redundant. Cache storage is now set at the processing unit level, using a checkbox labeled Enable Cache Storage. It is not possible to set this checkbox at migration time. To complete migration, remove the `isSeeder` property and instead configure cache storage for non-cache agents as needed use the processing unit setting Enable Cache Storage in the project CDD file. Note that enabling cache storage on non-cache agents is not recommended for production. It can be useful for testing and demonstration purposes.

## Configuring Settings (Cache OM only)

### Procedure

1. Migrate Legacy Oracle-only Backing Stores to JDBC Backing Store
2. The legacy Oracle-only (Oracle Types) backing store is no longer supported. If you were using the legacy Oracle-only (Oracle Types) backing store, you must migrate to the current implementation. See [Oracle Types to JDBC Backing Store Migration](#).
3. (All Cases) Validate the Project in TIBCO BusinessEvents Studio.  
It is recommended that you validate the project in TIBCO BusinessEvents Studio after migration, to help ensure that the project is correctly configured. Certain validation checks were added after 4.0. Validating the project may reveal issues that were not caught in the earlier release from which you migrated.
4. Rebuild EAR Files

### Result

As with any upgrade, you must rebuild all EAR files created with an earlier version.

## Existing TIBCO BusinessEvents Project at the Command Line

This option is equivalent to the following menu option in TIBCO BusinessEvents Studio: File > Import > TIBCO BusinessEvents > Existing TIBCO BusinessEvents Studio Project.

This is explained in [Import Projects in TIBCO BusinessEvents Studio](#).

After you complete the procedures in this section, complete the migration tasks as shown following, as needed for your project.

When you use this command-line (or TIBCO BusinessEvents Studio) option to import 4.x TIBCO BusinessEvents Studio projects, the same migration actions are done as in the UI-based migration. See [Migration from 4.x to 5.1](#)

Before you can use a 4.x project imported at the command-line in TIBCO BusinessEvents Studio you must do another procedure, explained in [Open the Imported Project in TIBCO BusinessEvents Studio](#).

## Import an Existing 4.x Project at the Command Line

You can import projects from earlier versions or same version using command line utility. After importing using the command line utility an additional procedure is required before you can work with the project in TIBCO BusinessEvents Studio.

### Procedure

1. Navigate to BE\_HOME/studio/bin/ and open a command prompt.
2. Execute a command with the following format (all on one line) at a command prompt:

```
studio-tools -core importExistingProject [-h] -p studioProjDir [-o targetProjDir] [-c CDDprojectPath] [-u PUNameFromCDD] [-xp 1.0/2.0]
```

For example:

```
studio-tools -core importExistingProject -p C:\FT\SomeProj -o c:\MyWorkspace\SomeProj -c COM.cdd -u Invproc -xp 2.0
```

If HTTP channel properties are migrated (from a specified CDD and processing unit to all HTTP channel resources' **Advanced** tab) you see a message like this:

```
Migrating HTTP properties of Processing Unit "PUName" from CDD "CDDprojectPath" to HTTPChannel(s) present in the project
```

When the import has completed successfully, you see a message in the command window like the following:

```
The existing 4.0 TIBCO BusinessEvents project has been successfully imported to c:\MyWorkspace\SomeProj.
```

## TIBCO BusinessEvents Studio Tools Options

### *TIBCO BusinessEvents Studio Tools Options for Importing an Existing Project*

| Option                                   | Description                                                                                                                        |
|------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|
| <code>-core importExistingProject</code> | Specifies the <code>importExistingProject</code> operation for importing a TIBCO BusinessEvents Studio project into the workspace. |
| <code>-h</code>                          | Optional. Displays help.                                                                                                           |

| Option | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| -p     | Source project: absolute path to the project directory of the TIBCO BusinessEvents Studio project to be imported.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| -o     | <p>Optional. Absolute path to the target project directory, where the project is imported to.</p> <p>If you specify the source project directory name as the last element in the path, it is used as the target project directory. If you specify a different directory as the last element in the path, the directory is created if it does not exist, and the source project directory is imported within the specified target directory.</p> <p>If you do not specify a target project directory, the original project contents are updated. If the project to be imported is a TIBCO BusinessEvents version 4 project, it is no longer compatible with version 4 after the import.</p> <p>If the target location points to an existing project, the import does not proceed and this message displays:</p> <p>The specified target location already exists and cannot be used.</p> |
| -c     | Optional. The CDD to use for migration actions. Project path of the CDD (path relative to the root directory of the source project).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| -u     | <p>Optional. If specified, then the -c option must also be specified. Specifies the name of the PU (within the specified CDD) that contains settings to be migrated.</p> <p>HTTP channel settings from this PU are migrated to all HTTP channel resources in the project.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| -xp    | <p>Optional. The XPath version to be compatible with the project. The values are:</p> <ul style="list-style-type: none"> <li>• (default) 1.0</li> <li>• 2.0</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## Open the Imported Project in TIBCO BusinessEvents Studio

To open a project imported at the command line, you must add it as a new project.

### Procedure

1. Start TIBCO BusinessEvents Studio. In Windows, click **Start > All Programs > TIBCO <YourEnvironment> > TIBCO BusinessEvents <version\_number> > TIBCO BusinessEvents Studio**.
2. From the **File** menu select **New > Project**. You see the **New Project > Select a Wizard** dialog.
3. Select **TIBCO BusinessEvents > Studio Project** and click **Next**.
4. In the **Project Name** field, enter the directory name where the imported project is located. This is used as the project name.

5. If you have imported the project to a directory in your default workspace, skip this step. If the project directory is located outside the default workspace, uncheck the Use default location check box and browse to the *parent* directory of the project imported at the command line.
6. Click **Finish**. The project folders appear in the Studio Explorer view.

## Migration of 3.x Projects

This section outlines how to migrate 3.x projects, after you install TIBCO BusinessEvents 5.5.

- If you are migrating 3.0.0 projects that use the legacy Oracle Types backing store, you must first upgrade your 3.0.0 installation to the latest 3.x version and update the Oracle Types backing store schema. After the schema update you can then migrate the data to the JDBC backing store, which you configure in the 5.5 version project.
- Berkeley DB object management is removed from the product in version 5.2. If you are migrating from Berkeley DB, see [Migrating with Berkeley DB Object Management](#) for preliminary steps to take in order to change to Cache OM.

## Import Clean and Validate the 3.x Project

### Procedure

1. Import the TIBCO Designer (3.x) project into TIBCO BusinessEvents Studio. See [Importing a 3.x TIBCO Designer Project](#).

If you will migrate from the Oracle Types backing store or from a Berkeley DB OM to the Cache OM with JDBC backing store, keep the 3.x project

2. In TIBCO BusinessEvents Studio select ProjectValidate to validate the project and then review the issues in the Problems tab and in the Error Log tab and resolve any errors. See [Clean and Validate 3.x Projects](#).

## Configure Runtime Properties in the CDD File

Most of the configuration that was done in TRA files is now done in the CDD file. Ensure that all valid 3.x runtime settings (except JVM and system level properties) are configured in the CDD. Some properties are not relevant in the current version, and additional properties not used in 3.x have been added to the product. You may have to add some properties manually to CDD property sheets.

Here are some tips:

### Procedure

1. Add runtime engine properties to the CDD file at the appropriate level for the scope of the property:
  - Cluster level for cluster-wide scope.
  - Processing Unit level for engine-wide scope in the specified type of engine (Processing Unit). You will have to think about your engines differently, as running different kinds of agent classes.
  - Agent level to limit the scope to the agent class.
2. TIBCO BusinessEvents properties that were configured in the TIBCO Designer TRA file generally go in the TIBCO BusinessEvents Studio TRA file:

BE\_HOME/studio/eclipse/configuration/studio.tra

3. Remove the runtime properties that are now configured elsewhere from the TRA file and ensure that only JVM or system level properties remain. Leaving these properties in the TRA can cause problems at runtime.

### Result

See [CDD File Overview \(For 3.x Users\)](#) for background information that helps you work with the CDD file.

## Check that `be-engine.xml` Settings are in the CDD File

### Procedure

1. Change the CDD file values at deploy-time without having to rebuild the EAR file. After that, there is no need for the `be-engine.xml` file. (It was used to add properties to the TIBCO Administrator UI in order to make changes at deploy time.)
2. Check that all the properties from your 3.x `be-engine.xml` that are valid in 5.5 are present in the CDD file.

## Adding Project Libraries (If Used)

Version 3.x project libraries containing entities (concepts, events and so on) are not compatible with project libraries in release 4.0.0 and higher, because the format for entities changed in the 4.0.0 release. They are not migrated.

(3.x project libraries that contain only shared resources will work in version 4.0.0 and up, but that is not a common use for project libraries. The format of shared resources remains the same in 5.5).

If you want to continue to use the 3.x project libraries, recreate the libraries and add them to the 5.5 project build path after migration. Refer to the "Working with Project Libraries" section, in the *TIBCO BusinessEvents Developer's Guide*.

### Procedure

1. Reconfigure TIBCO BusinessEvents-ActiveMatrix BusinessWorks Integration Projects (If Used)

Configuration of TIBCO BusinessEvents-ActiveMatrix BusinessWorks integration projects has changed. If a 3.x project contains TIBCO ActiveMatrix BusinessWorks or TIBCO Adapter resources, plan to use two projects: a TIBCO Designer project for the TIBCO Designer resources, and a TIBCO BusinessEvents Studio project. Refer to the *TIBCO BusinessEvents Developer's Guide* for details.

The TIBCO ActiveMatrix BusinessWorks processes used in the integration project do not appear in TIBCO BusinessEvents Studio. In version 3.x, both product UIs were implemented in TIBCO Designer, but since version 4.0, the TIBCO BusinessEvents UI has been implemented in Eclipse.

2. Migrate 3.x Decision Manager Projects (If Used)

### Result

If you want to continue to use decision tables, you must purchase the TIBCO BusinessEvents Decision Manager add-on product.

In a Decision Manager 3.x project, decision tables were in a separate project called a *decision project*, with a `.dp` file extension (along with related files). Decision projects were maintained in a separate application that is no longer used. The decision projects provided the decision tables for the TIBCO Designer project that contained the virtual rule functions (implemented by the decision tables).

## Import 3.x Decision Projects

To import 3.x decision projects you must first import the 3.x TIBCO Designer project into TIBCO BusinessEvents Studio as a TIBCO BusinessEvents Studio project. Then you import the related decision project into that TIBCO BusinessEvents Studio project. The decision table format is migrated to the current format during import.

Domain models are not imported while importing a decision project.

### Procedure

1. Import the 3.x TIBCO Designer project into TIBCO BusinessEvents Studio as a TIBCO BusinessEvents Studio project. See [Import Clean and Validate the 3.x Project](#) for full details.
2. In TIBCO BusinessEvents Studio, select **Import** from the File menu. You see the Import wizard Select dialog.
3. Select **TIBCO BusinessEvents > TIBCO BusinessEvents Decision Manager** and click **Next**. You see the Import Decision Project dialog.
4. In the Project Location field, browse to and select the decision project (.dp) file for the decision project that relates to the TIBCO Designer project you imported in [step 1](#).
5. In the Projects field, select the TIBCO BusinessEvents Studio project that you created by importing the related TIBCO Designer project in [step 1](#).

The decision tables are now added to the TIBCO BusinessEvents Studio project.

6. If you will use RMS, create the RMS project and copy project files to the appropriate folder so the project can be checked out by Decision Manager UI users.

## Migrate 3.x Database Concepts and State Models (If Used)

If you want to continue to use database concepts or state models, you must purchase the TIBCO BusinessEvents Data Modeling add-on product.

After importing the project, you must configure the Cluster Definition Descriptor (CDD) file to add the JDBC connection project path or paths, and enable database concepts on all engines (processing units) where you want to use them. Steps are as follows:

### Procedure

1. Open the project's CDD and select the **Cluster tab > Database Concepts**.
2. In the Database URIs field, add all JDBC shared resources used for creating database concepts. Click the plus sign to add a new row as needed, and add the project path to the resource.
3. Select the Processing Units tab (at the bottom of the window). Select each processing unit in turn and do one of the following:
  - To enable database concepts, check the Enable Database Concepts checkbox.
  - To disable database concepts, uncheck the checkbox.

When cache OM is used, the default mode for a cache cluster is Cache Only. However the default mode of a database concept is Memory Only. You can specify a mode explicitly by adding domain object overrides. See TIBCO BusinessEvents Data Modeling Developer's Guide for complete details.

## Choose a Cache Provider (Cache OM only)

Beginning with TIBCO BusinessEvents 5.0.0, Oracle Coherence is no longer provided with TIBCO BusinessEvents. An internal component, TIBCO BusinessEvents DataGrid, is used by default.

See [Migrating from Coherence to TIBCO BusinessEvents DataGrid Cache Provider](#) for important information about migration of Coherence functions. If you use cache OM, action is required:

- If you want to switch from Oracle Coherence to TIBCO BusinessEvents DataGrid, you must manually reconfigure the CDD file settings. See *TIBCO BusinessEvents Configuration Guide* for details.
- If you want to continue using Oracle Coherence as the cache provider, you must acquire a licensed copy of Oracle Coherence software and do some configuration. See *TIBCO BusinessEvents Configuration Guide* for details on enabling use of Oracle Coherence as the cache provider.
- The property `tangosol.coherence.distributed.localstorage` is migrated automatically to the cache-provider-neutral property `be.engine.cluster.isSeeder`. However, a change in design makes this property redundant. Cache storage is now set at the processing unit level, using a checkbox labeled Enable Cache Storage. It is not possible to set this checkbox at migration time. To complete migration, remove the `isSeeder` property and instead configure cache storage for non-cache agents as needed use the processing unit setting Enable Cache Storage in the project CDD file. Note that enabling cache storage on non-cache agents is not recommended for production. It can be useful for testing and demonstration purposes.

## Configure Settings (Cache OM only)

### Procedure

1. Migrate Legacy Oracle-only Backing Stores to JDBC Backing Store

The legacy Oracle-only (Oracle Types) backing store is no longer supported. If you were using the legacy Oracle-only (Oracle Types) backing store, you must migrate to the current implementation. See [Oracle Types to JDBC Backing Store Migration](#).

2. (All Cases) Validate the Project in TIBCO BusinessEvents Studio

It is recommended that you validate the project in TIBCO BusinessEvents Studio after migration, to help ensure that the project is correctly configured.

Certain validation checks were added after 4.0. So validating the project may reveal issues that were not caught in the earlier release from which you migrated.

3. Rebuild EAR Files

As with any upgrade, you must rebuild all EAR files created with an earlier version.

## CDD File Overview (For 3.x Users)

Beginning with the 4.0.0 release, most runtime properties and other deploy-time settings are configured using a structured XML file called the Cluster Deployment Descriptor (CDD). A big advantage of this change is that you can change CDD file values at deploy-time without having to rebuild the EAR file (the CDD file used is stored outside the EAR file).

A multi-tab editor in TIBCO BusinessEvents Studio enables easy maintenance of this file. This section explains the role of the CDD file for the benefit of those migrating projects from 3.x.

### The EAR file now includes all resources

In the current architecture, you do not select what resources to include in the EAR file. The EAR includes all project resources and can be very large. During runtime however, the resources are enabled (filtered) through the CDD Agent Classes and Collections tabs.

Read this section before beginning your migration. Also read related topics in TIBCO BusinessEvents Architect's Guide and TIBCO BusinessEvents Getting Started.

Documentation about the CDD settings and properties is provided in the TIBCO BusinessEvents Cluster Deployment Descriptor Configuration Guide.

## Most Runtime Properties are Configured in the CDD File

### 3.x Configuration

In 3.x (and earlier), runtime properties were set using individual properties set in one or more TRA files. In some cases, runtime properties were set in TIBCO Designer, specifically in the BAR resource, and some were set in the TIBCO Designer TRA file.

### 5.2 Configuration

Now only JVM-level properties (those that need to be used before the engine starts up) are set in the `be-engine.tra` file. Properties that were set in the TIBCO Designer TRA file (`designer.tra`) are now generally set in the `studio.tra` file:

```
BE_HOME/studio/eclipse/configuration/studio.tra
```

Other runtime properties are configured in the CDD file. The CDD file provides fields for all commonly used settings, and it has property sheets where you can add other properties as needed. The property sheets are available at various levels, cluster, processing unit, and agent, so that you can scope the effect of the property appropriately and provide overrides at lower levels.

## Processing Units (Engines) and Agent Classes are Configured in the CDD File

In the CDD, you configure *processing units* (equivalent to an engine at runtime). A processing unit references the agent or agents you want to include in the processing unit (engine) at runtime. At deploy time you specify which processing units to deploy.

In 3.x agents were configured using individual properties in the TRA files. Each TRA file provided the configuration for one engine.

Beginning with the 4.0.0 release, you configure all the processing units you need to deploy in a single CDD file. When you deploy an engine, you specify the processing unit to use. The processing unit configuration in the CDD determines which project resources and settings are used at runtime.

Some agents and processing units are created for you when you import a 3.x project into Studio based on 3.x information available. After you import the project into TIBCO BusinessEvents Studio, edit the CDD file to fully configure the agents and processing units as needed.

### Metadata Properties (Extended Properties) are Configured in the CDD File

The entity metadata properties (also known as extended properties) for cache and backing store are now configured in the CDD. Preloading configuration has also been simplified. This is explained in the migration sections.

## Importing a 3.x TIBCO Designer Project

You can directly import 3.x projects using the TIBCO BusinessEvents Studio user interface and save it as a current version project. You can also import a 3.x project at the command line. Import from versions earlier than 3.x is not supported.

After you import the project, see [Clean and Validate 3.x Projects](#) for the next step.

## Importing a 3.x Project into TIBCO BusinessEvents Studio

To import 3.x projects into TIBCO BusinessEvents Studio, follow the procedure below.

## Procedure

1. Start TIBCO BusinessEvents Studio. In Windows, click **Start > All Programs > TIBCO > Environment\_Name > TIBCO BusinessEvents <version\_number> > Studio**.
2. From the **File** menu, select **Import**. You see the Import wizard Select dialog.
3. Select TIBCO BusinessEvents **TIBCO Designer** and click **Next**. You see the TIBCO Designer Project Import Wizard.

**TIBCO Designer Project Import Wizard**

**Import Designer Project**

Import a Designer project from the local file system into the workspace

**Designer Archive Information**

Archive Location:

**Imported Studio Project Information**

Project name:

XPath Version:

☒ Use default location

Location:

4. In the Archive Location field, browse to the location of the TIBCO Designer project and select its EAR file or its vcrepo.dat file.
5. In the Project Name field, enter a name for the TIBCO BusinessEvents Studio project. The default value is the original project name.
6. Select the XPath version to be used for the project in the **XPath Version** drop-down.
7. Specify a project location, or use the default workspace.
8. Click **Finish**.

## Result

The progress bar displays while the import is done. The status bar at the bottom of the window also displays progress. When the import is complete, you see the project folders in the Studio Explorer view.

## Importing a TIBCO BusinessEvents 3.x Project at the Command Line

This utility imports a TIBCO BusinessEvents 3.x (TIBCO Designer) project at the command line. Projects imported using this command-line utility do not run in the context of Eclipse (TIBCO BusinessEvents Studio). An additional step is required if you want to open the project in TIBCO BusinessEvents Studio, as explained below.

### Procedure

1. Navigate to BE\_HOME/studio/bin/ and open a command prompt.
2. Execute a command with the following format (all on one line) at a command prompt:

```
studio-tools -core importDesigner -d designerProjDir [-n studioProjName] -p
studioProjDir [-xp XPathVersion]
```

For example:

```
studio-tools -core importDesigner -d C:\FT\FT_Project -n FTImport -p
c:\myWorkspace\FTImported -xp 2.0
```

When the import has completed successfully, you see a message in the command window:

```
Imported the Designer Project successfully.
```

## TIBCO BusinessEvents Studio Tools Options

### *TIBCO BusinessEvents Studio Tools Options for Importing 3.x TIBCO Designer Projects*

| Option               | Description                                                                                                                                                                             |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| -core importDesigner | Within the core category of operations, specifies the importDesigner operation for importing a TIBCO BusinessEvents 3.x (TIBCO Designer) project.                                       |
| -d                   | Absolute path to the TIBCO Designer project directory (the .dat file can be included but is not required). Import of release 3.x projects is supported.                                 |
| -n                   | Optional. Specifies the name of the TIBCO BusinessEvents 4.x project (TIBCO BusinessEvents Studio project). If not specified, the TIBCO BusinessEvents Studio 3.x project name is used. |
| -p                   | Absolute path to the TIBCO BusinessEvents 4.x project directory (the TIBCO BusinessEvents Studio project). The directories in the path are created if they do not exist.                |
| -xp                  | Optional. The XPath version to be compatible with the project. The values are: <ul style="list-style-type: none"> <li>• 1.0</li> <li>• 2.0</li> </ul>                                   |

See [Open the Imported Project in TIBCO BusinessEvents Studio](#) for a procedure you must do if you want to open the project in TIBCO BusinessEvents Studio

## Opening the Imported Project in TIBCO BusinessEvents Studio

To open a project imported at the command line, you must add it as a new project.

### Procedure

1. Start TIBCO BusinessEvents Studio. In Windows, click **Start > All Programs > TIBCO <YourEnvironment> > TIBCO BusinessEvents <version\_number> > TIBCO BusinessEvents Studio**.
2. From the File menu select **New > Project**. You see the New Project — Select a Wizard dialog.
3. Select **TIBCO BusinessEvents > Studio Project** and click **Next**.
4. In the Project Name field, enter the directory name where the imported project is located. (This is used as the project name.)
5. (If you imported the project to a directory in your default workspace, skip this step.) If the project directory is located outside the default workspace, uncheck the Use default location checkbox and browse to the directory of the project imported at the command line.
6. Click **Finish**. The project folders appear in the Studio Explorer view.

## Clean and Validate 3.x Projects

This section explains how to clean and validate a 3.x project, and how to fix errors.

Executing Project > Clean also performs validation, if you check Project > Build Automatically. In this case you do not have to do [step 2](#).

After you import the 3.x project into TIBCO BusinessEvents Studio Explorer, do the following:

### Procedure

1. Highlight the project name in TIBCO BusinessEvents Studio and select **Project > Clean**. At the Clean dialog, click Clean projects selected below, and then select the imported project. Click **OK**.  
All build problems and build states are discarded. The project is rebuilt from scratch.
2. Highlight the project name in Studio Explorer and select **Project > Validate** to validate the project.

### Result

You may see some common validation errors that are addressed in the following sections. If you see additional errors that you cannot resolve, contact your TIBCO representative for assistance.

## Fixing Reference and XSLT Mapper Errors

### Ambiguous Reference Errors (Unqualified References)

During migration, duplicate name references can cause issues. If the project contains unqualified references to rules, rule functions, or ontology types, and any of the rules, rule functions, or ontology types have the same simple name, duplicate name validation errors will result.

In the TIBCO BusinessEvents Studio Problems tab, you may see listings for these issues, such as the following:

Ambiguous reference. Reference must be qualified, as multiple elements exist with the same name [/sharedResources/Element, Rules/Element, Concepts/Element]

One source of this issue is that beginning with the 4.0.0 release, rules are separate resources, whereas in the 3.x product, they exist within ruleset resources.

### To Resolve the Issue

Qualify all such ambiguous references.

### XSLT Mapper Errors

If you have used the XPath (XSLT) mapper in TIBCO Designer, there could be errors that prevent a clean validation of the project after it is imported.

In 3.x, XSLT Mapper errors were not reported during project validation. This validation has been added, beginning with the 4.0.0 release. Therefore, any mapper errors must be fixed before project validation can be successful. These errors existed in the 3.x product, though they may not have caused any runtime problems.

#### To Resolve the Issue

In TIBCO BusinessEvents Studio double-click those items in the Problems view. The rule editor displays the corresponding rule or rule function. In the editor. Check for red error indicators on lines containing function mapping. Where you see an error indicator on a line containing Mapper code, Ctrl-click the underlined argument text to open the Function Argument Mapper dialog. Click the Mapper Check and Repair (check-mark icon) button.

Some errors can be auto-fixed: Click the validate option (the check mark) in the mapper. You see the Mapper Check and Repair dialog. Select the items you want to fix and click OK. (Using auto-fix is harmless even if the errors cannot be auto-fixed.) Then manually fix any errors that cannot be autofixed. For example, errors such as undefined variable errors cannot be fixed automatically.

## Oracle Types to JDBC Backing Store Migration

### The Oracle-only (Oracle Types) backing store is not supported in 5.0.0

If you were using this backing store implementation in your prior version of TIBCO BusinessEvents, implement a JDBC backing store and migrate your data to it as explained in this section.

If you were using the JDBC backing store in any release, no migration is required.

Migration steps depend on whether you are migrating from 3.0.0, or from a later 3.x release, or from a 4.x release, as indicated in the tasks below.

During migration, you must keep the JDBC Connection resource for the existing Oracle-only backing store, and you must be able to connect to it.

The data migration process uses two backing stores, the legacy backing store and the new JDBC backing store. However after migration, you'll have one backing store. Use of two backing stores is limited to migration procedures.

If you plan to make any schema changes, make them after the backing store data is migrated successfully, following directions in TIBCO BusinessEvents Developer's Guide.

For all versions, first back up your backing store data.

### 3.0.0 Only Upgrade to 3.x and Update the Legacy Backing Store Schema

New TIBCO BusinessEvents metadata tables were added to the backing store schema in version 3.0.1. If you are upgrading from version 3.0.0, you first must upgrade to the latest 3.x version before you migrate data to a JDBC backing store.

#### Procedure

1. Upgrade from 3.0.0 to the latest 3.x version.
2. If the deployed application is running, gracefully shut down all agents and cache servers before you proceed.

3. Log in to the Oracle server as `be_user`, password `be_user` (or whatever username and password you are using, as set in the `initialize_database.sql` script).
4. Navigate to the location of the scripts (by default in `BE_HOME/bin`) and open an SQLPlus prompt. Identify yourself as the user you logged in as.
5. At the SQL prompt, type the following to run the script:

```
@create_tables.sql
```

## Result

Running this script does not affect any existing tables (therefore there is no need to run `be-oradeploy.exe`). Your database tables are now configured.

### 3.x Only: Import Projects into TIBCO BusinessEvents Studio

Import the project into TIBCO BusinessEvents Studio and ensure that the migrated project is configured correctly. See [Migration of 3.x Projects](#) for full details.

## Add a JDBC Backing Store

In this task, you set up a *new* backing store, including creation of a new JDBC Connection resource.

Do not remove the JDBC Connection resource for the Oracle-only backing store database from your project until you have completed all migration tasks.

### Procedure

1. Add the JDBC backing store, following instructions in Chapter 30, JDBC Backing Store Setup, which is in TIBCO BusinessEvents Developer's Guide.
2. It is a good idea to open your project again in TIBCO BusinessEvents Studio and test both the JDBC connections. If you need to make corrections to the connections, do so before you build the EAR.
3. When you have set up the new backing store, including the JDBC connection and CDD settings, Rebuild the EAR file.

## Set Up the TIBCO BusinessEvents TRA File

### Procedure

1. Open the `BE_HOME/bin/be-migration.tra` file and specify appropriate values for the properties shown below, with example values.
2. For notes on the properties see [Backing Store Data Migration Property Reference](#).

```
# Oracle/JDBC Migration Properties
be.migration.batchsize 1000
be.migration.workersize 16
be.migration.objecttable true
be.migration.target.type jdbc
# Database URLs
# Source database:
be.oracle.dburi.count 1
be.oracle.dburi.0 /Resources/myORCL.sharedjdbc
be.oracle.dburi.pool.initial.0 5
be.oracle.dburi.pool.min.0 5
be.oracle.dburi.pool.max.0 10
# Target database:
be.jdbc.dburi.count 1
be.jdbc.dburi.0 /Resources/myJDBC.sharedjdbc
be.jdbc.dburi.pool.initial.0 5
be.jdbc.dburi.pool.min.0 5
be.jdbc.dburi.pool.max.0 10
```

## Run the Data Migration Process

### Procedure

1. Open a command prompt, navigate to BE\_HOME/bin, and execute the following command:  

```
be-migration -copy -ear EARFile
```

Wait until the process is complete
2. If you set the property `be.migration.objecttable=false` in [Set Up the TIBCO BusinessEvents TRA File](#) then you must manually migrate OBJECTTABLE table contents. (Use your DBMS product documentation for this task.)
3. You can now start the TIBCO BusinessEvents engine and use the JDBC backing store with the migrated data.

## Remove Legacy Backing Store and JDBC Connection

When you have tested the migration and are sure that all is working well, you can remove the legacy backing store JDBC connection and archive, or otherwise remove, the legacy backing store files.

## Backing Store Data Migration Property Reference

### Oracle-Only to JDBC Backing Store Data Migration

| Property                              | Notes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <code>be.migration.batchsize</code>   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                                       | Defines the database batch size to be used during the migration process. The best size depends on the database configuration.<br><br>Default is: 200                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <code>be.migration.workersize</code>  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                                       | Defines how many concurrent threads to use during the migration process. Set to the number of processors available.<br><br>Default is: 10                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <code>be.migration.objecttable</code> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                                       | <p>If the existing Oracle backing store contains a large amount of data, the migration process can take many hours to complete. If this is the case, you can shorten the process using this property.</p> <p>When this property is set to false, the migration process ignores the data contained in OBJECTTABLE table. Skipping this table can shorten the migration time considerably.</p> <p>If you skip migration of the OBJECTTABLE table, you must then copy this table from the Oracle to the JDBC backing store database using other tools (or simple SQL scripts).</p> <p>Default is true.</p> |
| <code>be.migration.target.type</code> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Property | Notes                                                                                                                                                                                                                                                                                                                                                    |
|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|          | <p>Defines which type of schema to use for the new backing store. Values are:</p> <p><b>jdbc</b><br/>: The JDBC backing store schema. Use this value for migrating from an Oracle backing store to a JDBC backing store (the procedure documented in this section).</p> <p><b>oracle</b><br/>: No longer valid as an option.</p> <p>Default is jdbc.</p> |

# Property Migration

This chapter contains a reference table to assist you in locating the 4.x properties or UI settings that correspond to 3.x properties.

Note that many logging properties have been replaced and are not directly migrated.

The main properties used in prior releases are listed on the left, with their current version equivalents on the right. Note that it may be possible for properties listed as going in Cluster tab > Properties to be added to a lower-level property sheet, generally the processing unit property sheet, as appropriate. See *TIBCO BusinessEvents Configuration Guide* for more details on configuring the Cluster Definition Descriptor (CDD) file.

## Deprecated and Unused Properties

Properties that are deprecated in this release or are not used in this release are noted below. A list of unused properties from older supported versions of TIBCO BusinessEvents is provided in [Deprecated and Unused Properties](#).

## Property Migration Reference

### *Property Migration Reference*

| Earlier Version Property (mostly 3.x and 4.x)       | 5.6 CDD Editor                                                   |
|-----------------------------------------------------|------------------------------------------------------------------|
| Agent Group Name (in BAR resource)                  | Agent Classes Tab > <i>AgentClassName</i> > Agent Class Name     |
| <code>Agent.AgentGroupName.cacheOpsQueueSize</code> | Agent Classes Tab > <i>AgentClassName</i> > Properties           |
| <code>Agent.AgentGroupName.checkDuplicates</code>   | Agent Classes Tab > <i>AgentClassName</i> > Check for Duplicates |
| <code>Agent.AgentGroupName.concurrentwm</code>      | Agent Classes Tab > <i>AgentClassName</i> > Concurrent RTC       |
| <code>Agent.AgentGroupName.dbOpsBatchSize</code>    | Agent Classes Tab > <i>AgentClassName</i> > Properties           |
| <code>Agent.AgentGroupName.dbOpsQueueSize</code>    | Agent Classes Tab > <i>AgentClassName</i> > Properties           |
| <code>Agent.AgentGroupName.dbthreadcount</code>     | Agent Classes Tab > <i>AgentClassName</i> > Properties           |
| <code>Agent.AgentGroupName.key</code>               | Processing Units Tab > <i>PUName</i> > Agents > Key              |
| <code>Agent.AgentGroupName.maxActive</code>         | Agent Classes Tab > <i>AgentClassName</i> > Max Active           |
| <code>Agent.AgentGroupName.priority</code>          | Processing Units Tab > <i>PUName</i> > Agents table > Priority   |

| Earlier Version Property (mostly 3.x and 4.x)                                                                                                     | 5.6 CDD Editor                                                              |
|---------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| <code>Agent.AgentGroupName.recoveryPageSize</code>                                                                                                | Agent Classes Tab > <i>AgentClassName</i> > Properties                      |
| <code>Agent.AgentGroupName.threadcount</code>                                                                                                     | Agent Classes Tab > <i>AgentClassName</i> > Properties                      |
