New Features

This section lists features added in this release.

Release 6.1.0

The following are the highlighted features in this release.

- **TIBCO Espresso:** This release of TIBCO ActiveMatrix BusinessWorks Plug-in for Mobile Integration includes a new component, Espresso.

Based on an event-action model, using Espresso you can automate your flows where received events can trigger pre-configured actions. Espresso makes this possible by exposing the REST APIs .

Espresso consists of the following :

- The mobile client application provides a user interface to view and select events, pick the action to be triggered for the selected event, map attributes, add filters, set schedules, change profile details, mark favourite pods, and brew an expression. After brewing an expression, users must run it to start receiving notifications and alerts based on the events created.
- The Espresso server provides the interface for making providers available to the mobile client application. The server mandates that a provider must describe its events and actions in a JSON format conforming to the JSON provider definition schema.
- Providers are third-party applications that provide events to the server. Provider applications need to register themselves with the Espresso server to be a part of the Espresso inventory.
- **EspressoNotify:** This activity is used to generate events and send notifications to the Espresso server.
- **Espresso Provider:** The Espresso Provider shared resource collects events from the EspressoNotify Activity and the Espresso Server.

Release 6.0.0

The following are the highlighted features in this release.

- **Dependency checks:** The following is the required dependency check for TIBCO ActiveMatrix BusinessWorks Plug-in for Mobile Integration:
 - TIBCO ActiveMatrix BusinessWorks Enterprise 6.0.0
- **Context-sensitive help:** You can now access the context page for MI activities and shared resources. To access the context-sensitive help, right-click the activity in Process Editor in TIBCO Business Studio and select **Help > Reference Page**. You can also access the context-sensitive help by selecting the activity and pressing the F1 key.

Release 2.0.0

The following are the highlighted features in this release.

- **Mi Service:** This component collects notifications from the TIBCO ActiveMatrix BusinessWorks Plug-in for Mobile Integration and sends to the Push Notification Service. It also connects Push Notification Service feedback service to the TIBCO ActiveMatrix BusinessWorks Plug-in for Mobile Integration event source.
- **MI Palette:** TIBCO ActiveMatrix BusinessWorks Plug-in for Mobile Integration provides the following activities, event sources, signal-ins, and shared resources:
 - Acknowledgement Receiver
 - Feedback Receiver
 - Send Push Notification
 - Subscription Receiver
 - Timeout Receiver
 - Wait for Acknowledgement
 - Mi Service
 - PNS Communicator
 - HTTP Connector
- **Collapse Key:** Mobile Integration Plug-in provides a unified support for collapse keys for both APNS and GCM.
- **RetryCount:** This works for the live notifications.
- Supports push notifications to iOS and Android devices.

Deprecated and Removed Features

No features are deprecated or removed as of version 6.1.0 of TIBCO ActiveMatrix BusinessWorks Plug-in for Mobile Integration.

Closed Issues

There are no closed issues in version 6.1.0 of TIBCO ActiveMatrix BusinessWorks Plug-in for Mobile Integration.

Known Issues

The table in this section lists the known issue in this release.

Key	Description
BWMI-235	Summary: Reference help is not available in this release (2.0.0) of TIBCO ActiveMatrix BusinessWorks Plug-in for Mobile Integration. Workaround: None.
