**Released: June 2023**

## **New features**

This release contains no new features.

## **Changes in Functionality**

This release includes no changes to functionality.

## **Changes to third-party libraries**

The Spring framework was updated to version 5.2.24.

## **Closed issues**

This release contains no closed issues.

## **Known Issues**

This release contains the following known issues:

- Search can execute on all field types except linked fields and labels of foreign keys or enumerations.
- Search with computed values or inherited fields might lead to performance issues.
- The use of keywords that contain only special characters is not supported.
- Search input is limited to 1001 characters.
