Known Issues....5

New features

The add-on's internal API was updated to leverage an improved API from the TIBCO EBX® core product.

Changes in Functionality

This release includes no changes to functionality.

Changes to third-party libraries

This release contains no changes to third-party libraries.

Closed Issues

This release contains no closed issues.

Known Issues

This release contains the following known issues:

- Search can execute on all field types except: inherited fields, linked fields, and labels of foreign keys or enumerations.
- Search with computed values is only supported for optimized fields. A computed value is not optimized when it has a dependency on values outside of the current table.
- The use of keywords that contain only special characters is not supported.
- Search input is limited to 1001 characters.
