## **Table of Contents**

I. Introduction.....	4
II. PTFs after MFT Platform Server for Windows 7.1 .....	4
III. Fixes in MFT Platform Server for Windows 7.1.1 .....	4

## I. Introduction

MFT Platform Server for Windows 7.1.1 is now generally available. MFT Platform Server enables secure, controlled file-transfer activity on all platforms. With the power of MFT Platform Server, users can transfer critical business files between applications, integrate data from a network of stores or branch locations, or send large files to an offshore data center.

MFT Platform Server for Windows 7.1.1 resolves outstanding issues from the previous version of Platform Server for Windows. TIBCO continues to stay ahead of the competition by adding the most advanced technology to MFT Platform Server.

## II. PTFs after MFT Platform Server for Windows 7.1

- CW01820
  - Fixes a problem where all sub-directories are not transferred and mini-dumps may be created when using the \$(SDIR) token on DNI receives.
  - Fixes a problem when after modifying the file name in a template the updates are not saved until the server is refreshed. Template changes are now saved without requiring a refresh.
  - Fixes a problem where the Administrator GUI may crash if the MFT Platform Server Administrator Auto Refresh Rate is less than 10 seconds.
  - Fixes a problem where log and event Viewer records were written for all incoming connections including keep alive requests from a load balancer. MFT will log requests if data is sent on the connection. If the connection is just opened and closed then nothing is logged.

## III. Fixes in MFT Platform Server for Windows 7.1.1

- FTMSMGR: Resolved an exception when a remote Platform Server that was being administered through another MFT Platform Server Administrator was deleted.
- FTMSMGR: Resolved a memory leak created when Auto Refresh is enabled and the Past Transactions window is kept open.
- FUSPING: Fixed fieldVal error message reported.
- Installer: Fixed an issue where an installation would fail when a license key is not provided at the time of the install.
- DNI: Resolved error reported when DNI scans thousands of files to transfer.
