Support for Address Validation

TIBCO Omni-Insurance™ provides support for address validation operations. These address validation operations require the installation of the Loqate component. Loqate must be installed with an associated license key. You can obtain a license key from iWay Customer Support and download the files required to install Loqate from the Loqate website at:

<https://www.loqate.com/en-us/>

In this chapter:

- [Installing Loqate on Windows](#)
- [Installing Loqate on Linux](#)

Installing Loqate on Windows

Loqate is used to enable address validation operations. Loqate must be installed on the system where Omni-Insurance™ is currently running.

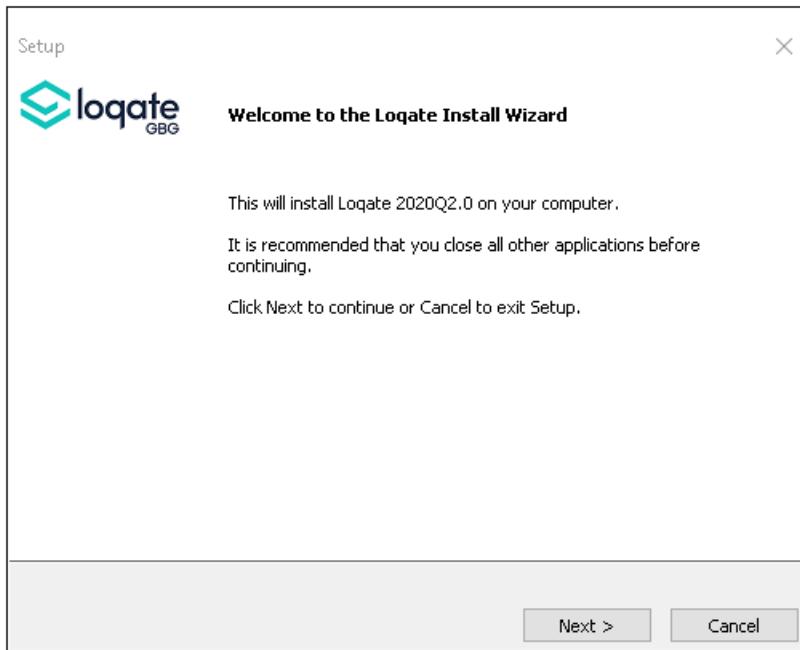

Procedure: How to Install Loqate on Windows

You must stop the Omni-Gen Server and all Omni-Gen services before installing Loqate. To install Loqate on Windows platforms:

1. Create the following directory on your file system:
`C:\loqate`
2. Download the files required to install Loqate from the Loqate website (<https://www.loqate.com/en-us/>).
3. Right-click the `setup_64.exe` installation file for Loqate, and select `Run as Administrator` from the context menu.

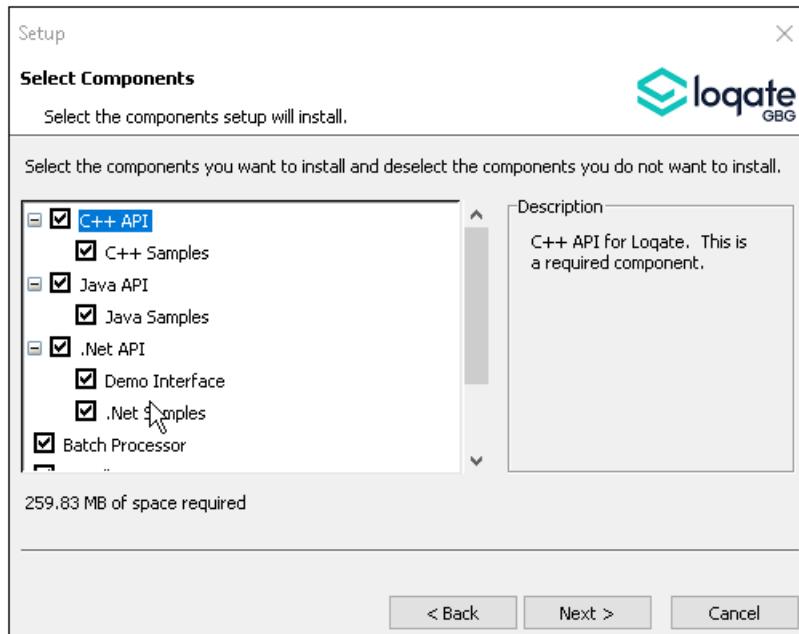

Installing Loqate on Windows

The Welcome to the Loqate Install Wizard dialog box opens, as shown in the following image.

4. Click Next.

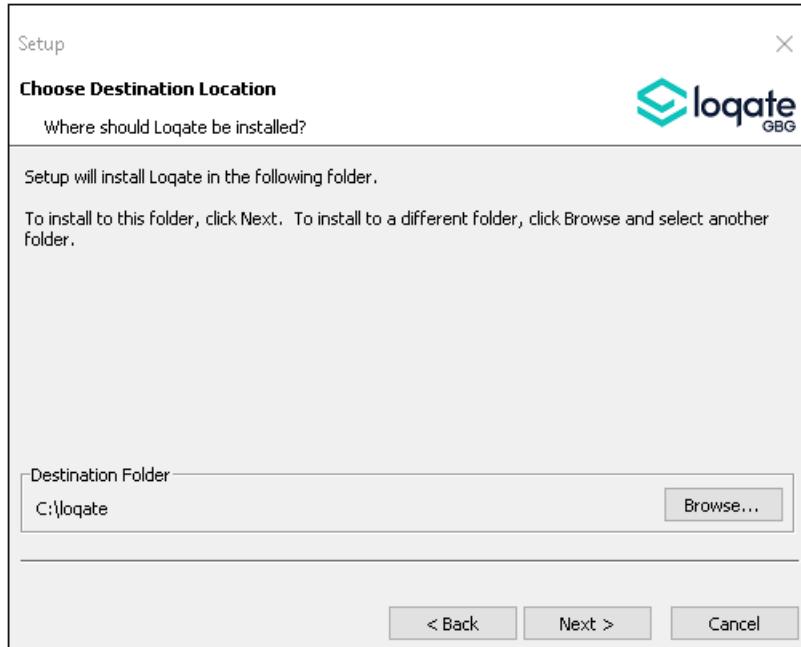

The Select Components dialog box opens, as shown in the following image.

5. Accept all of the components that are selected by default for installation and then click **Next**.

Installing Loqate on Windows

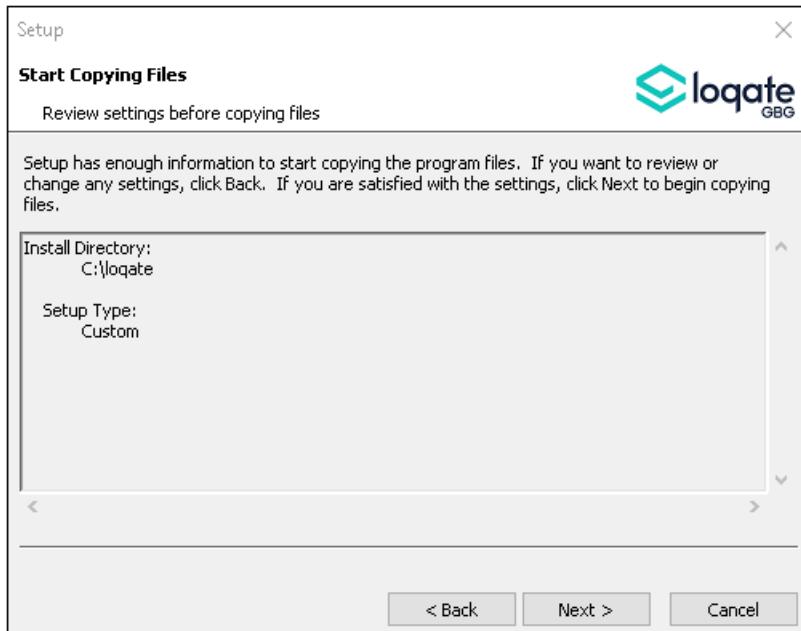

The Choose Destination Location dialog box opens, as shown in the following image.

Note: The recommended installation location (destination folder) is C:\loqate. If you choose a different installation location, then you will have to manually update the Loqate step in each validation plan with your specific path.

6. Ensure that C:\loqate is specified as the destination folder and then click Next.

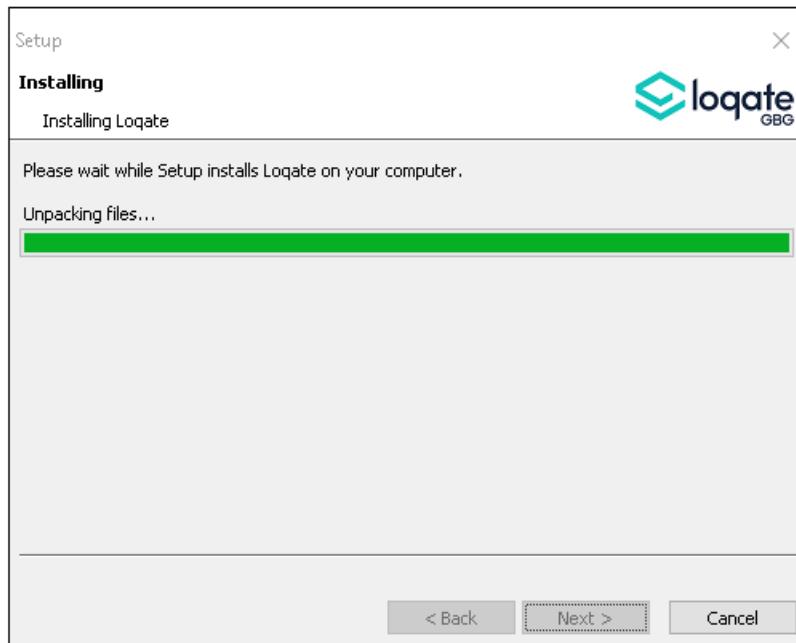

The Start Copying Files dialog box opens, as shown in the following image.

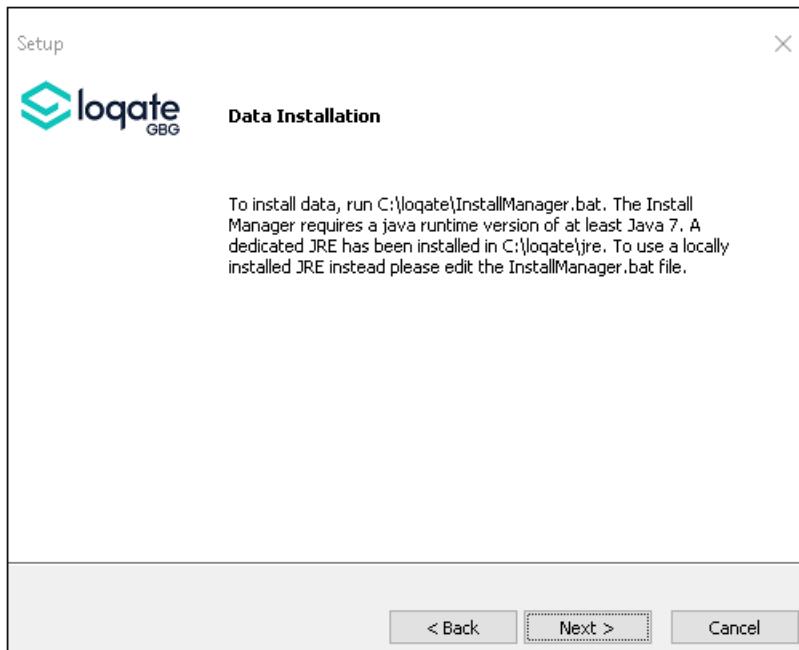

7. Click **Next**.

Installing Loqate on Windows

The Installing dialog box opens and displays a progress bar for the Loqate installation, as shown in the following image.

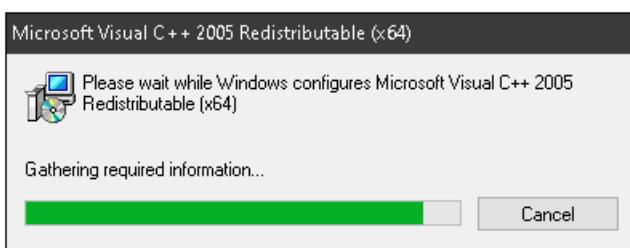

During the installation, the Data Installation dialog box opens, as shown in the following image.

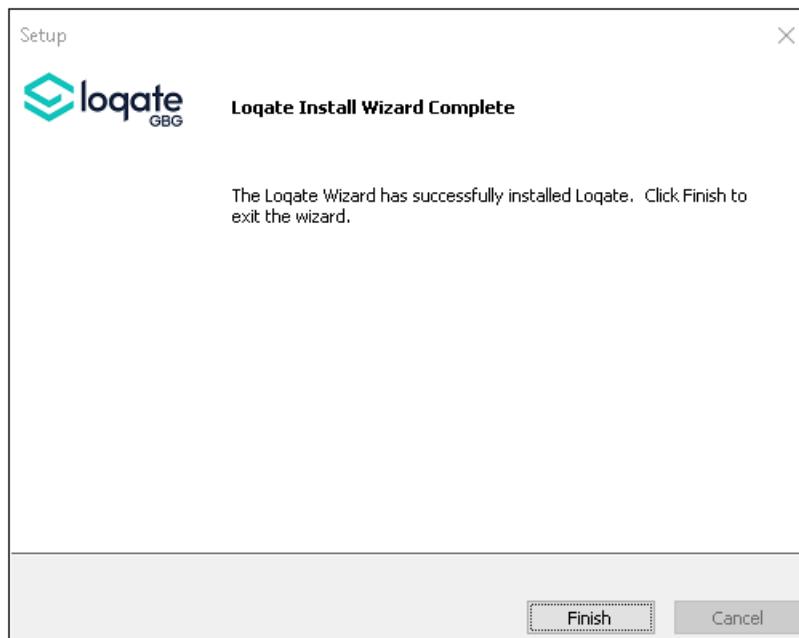

8. Click Next to continue.

A Microsoft Visual C++ 2005 Redistributable (x64) pop-up dialog box may open, as shown in the following image. You can ignore this pop-up dialog box.

Installing Loqate on Windows

When the installation is complete the Loqate Install Wizard Complete dialog box opens, as shown in the following image.

9. Click *Finish*.

Verify that your system PATH environment variable has been updated to include the Loqate installation location (for example, C:\loqate).

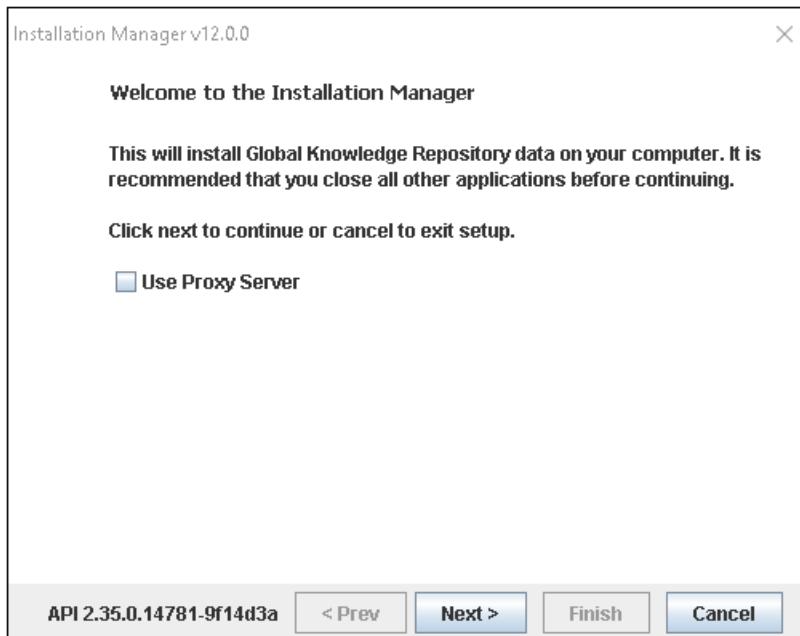

You are now ready to install Global Knowledge Repository data on your system.

10. On your file system, navigate to the Loqate installation directory. For example:

`C:\loqate`

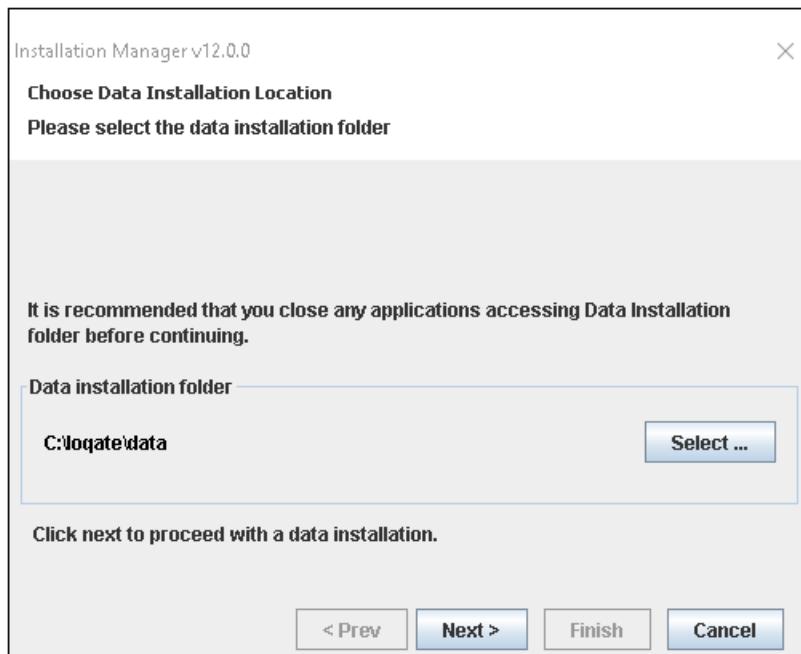

11. Double-click the *InstallManager.bat* file.

The Welcome to the Installation Manager dialog box opens, as shown in the following image.

12. Click Next.

The Choose Data Installation Location dialog box opens, as shown in the following image.

13. Click *Select*.

On the Select Data Install Folder dialog box, navigate to, and select, the following directory:

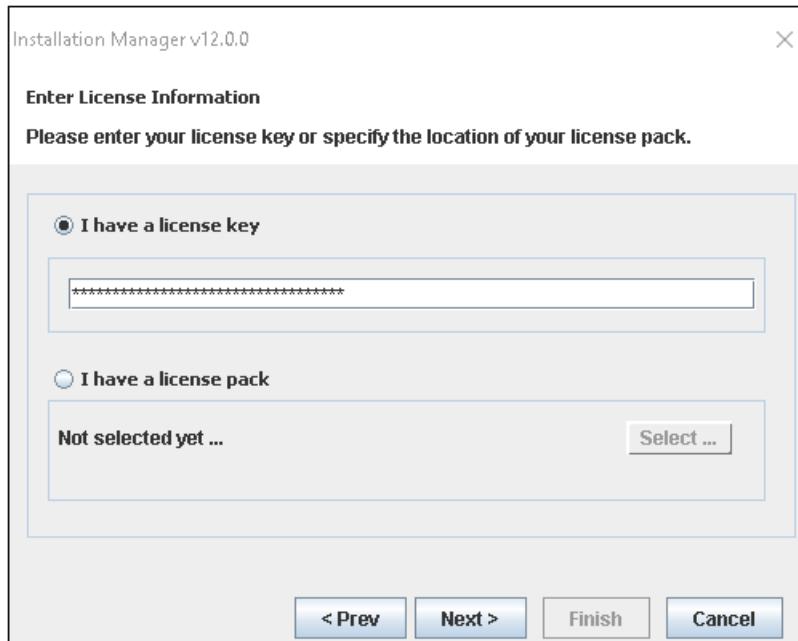

`C:\loqate\data`

14. Click *OK*.

You are returned to the Choose Data Installation Location dialog box.

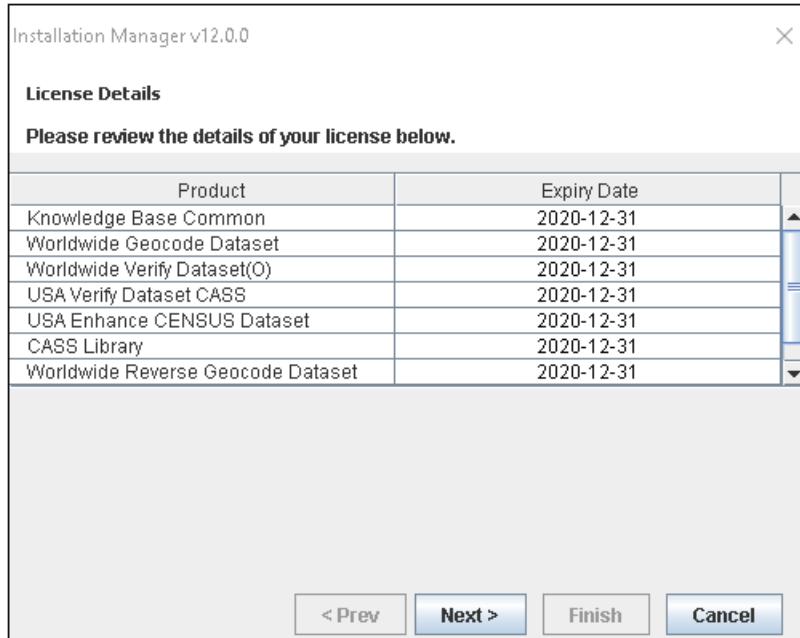

15. Click *Next* to continue with the installation.

The Enter License Information dialog box opens, as shown in the following image.

16. Type the Loqate license key, and then click Next.

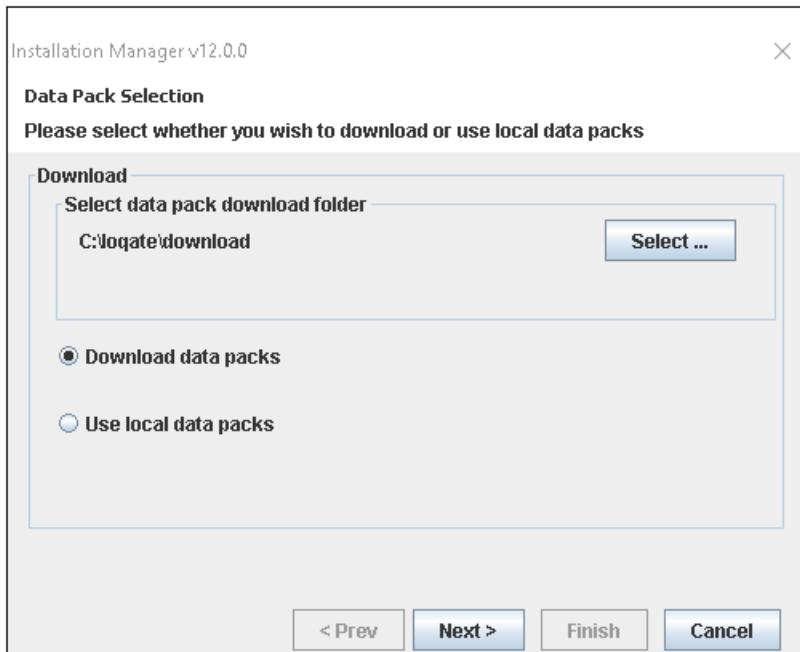

The License Details dialog box opens, as shown in the following image.

Note: The list of products that is displayed will vary depending on your license.

17. Confirm the license details and then click *Next*.

The Data Pack Selection dialog box opens, as shown in the following image.

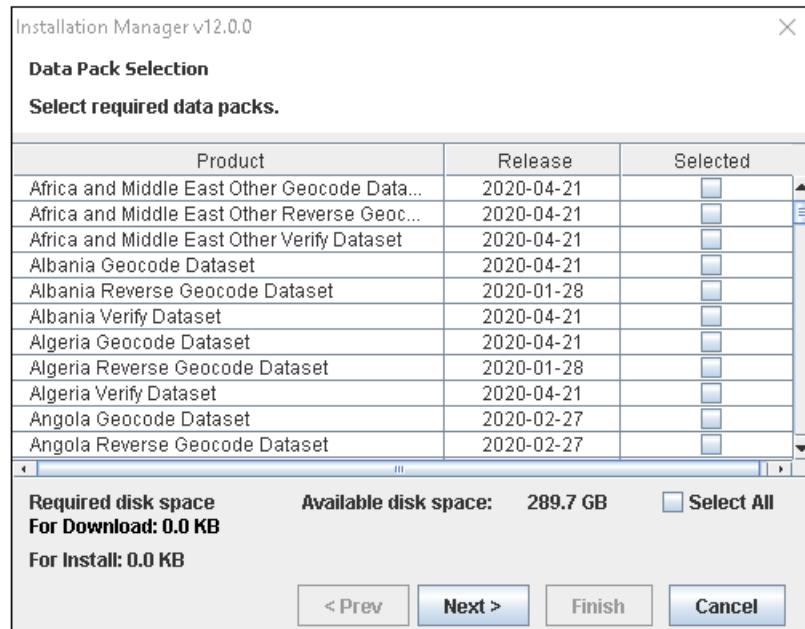

18. Click Select.

 Navigate to, and select, the location of the data pack download folder. For example:

<C:\loqate\download>

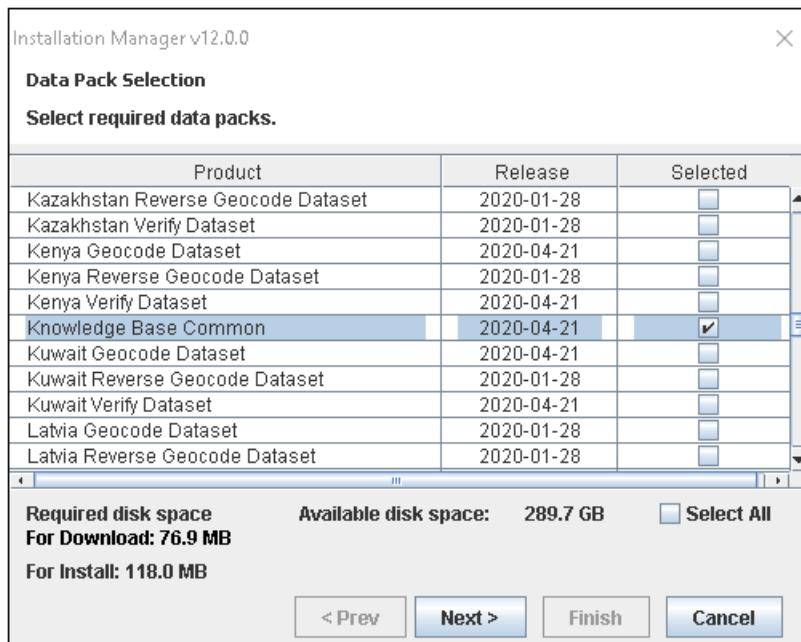

19. Click OK to close the dialog box and then click Next on the Data Pack Selection dialog box to continue.

20. Deselect the *Select All* check box, as shown in the following image.

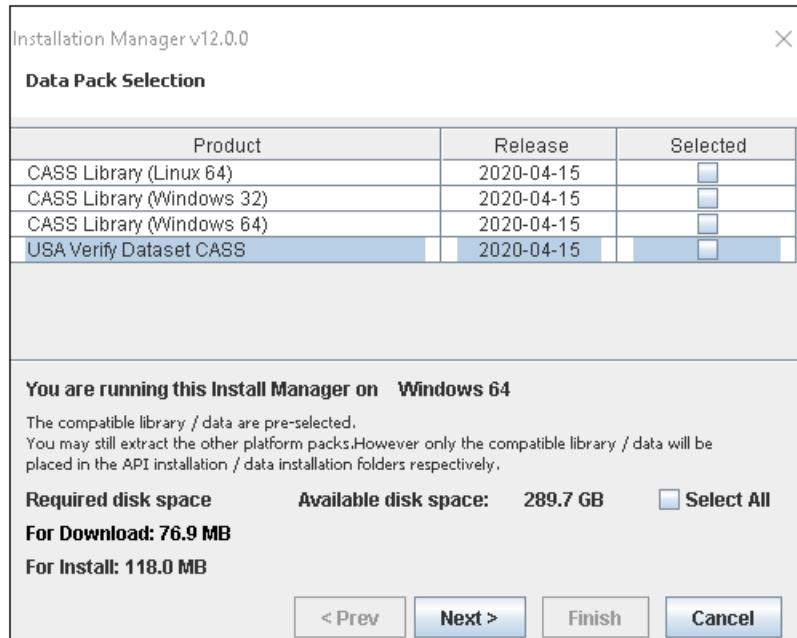

Note: The list of products that is displayed will vary depending on your license.

21. In the list of data packs, select only the data packs for which you are licensed. You must select Knowledge Base Common, as shown in the following image.

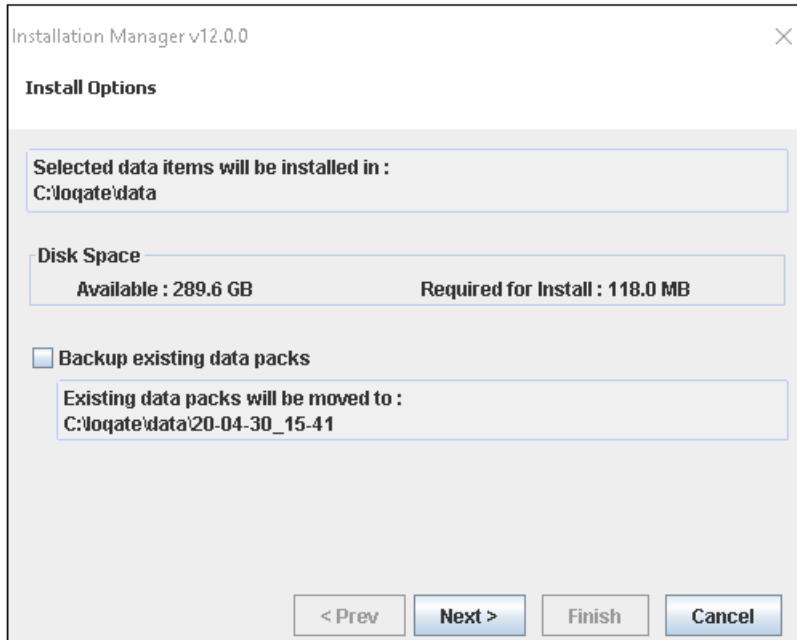

22. Click Next to continue.

23. Deselect all CASS library data packs, and then click Next, as shown in the following image.

The Install Options dialog box opens, as shown in the following image.

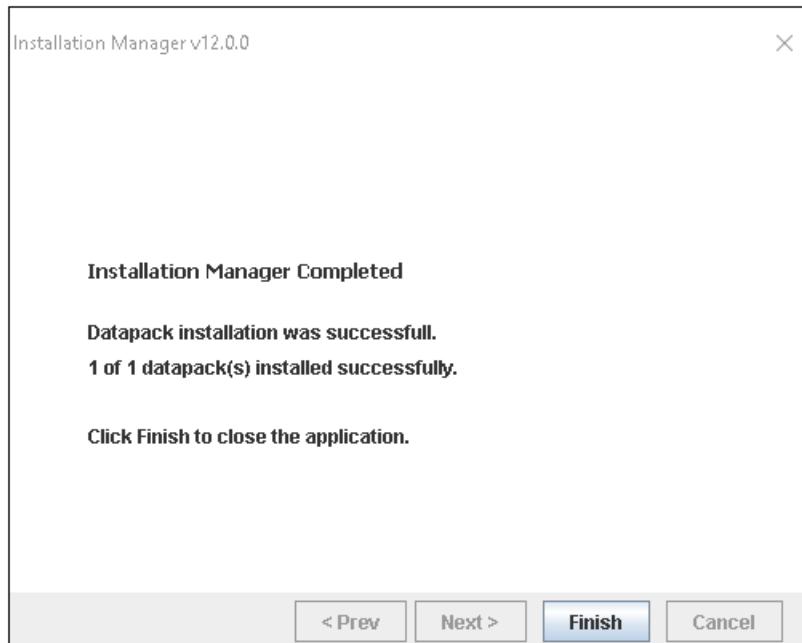

24. Click Next.

The download proceeds and displays its progress.

25. Wait for the download to complete, which can take a few minutes, and then click Next to continue.

Installing Loqate on Linux

The Installation Manager Completed dialog box opens, as shown in the following image.

26. When the installation is complete, click *Finish*.

Installing Loqate on Linux

Loqate is used to enable address validation operations. Loqate must be installed on the system where Omni-Insurance is currently running.

Procedure: How to Install Loqate on Linux

To install Loqate on Linux platforms:

1. Navigate to the directory containing the installation file (*loqate_installer_x86_64-gcc7*), and execute the Loqate installer. For example:

```
# ./loqate_installer_x86_64-gcc7
```

```
This will install Loqate on your computer. Continue? [n/Y] Y
```

2. Type Y and press *Enter*.
3. Type the location to install Loqate (for example, */software/loqate*), as shown below.

```
Where do you want to install Loqate? [/opt/loqate] /software/loqate
```

A prompt appears, asking you to select the components to install, as shown below.

```
Please select the components to install. Items to install are marked  
with an asterisk
```

```
* 1. Install Manager  
* 2. Sample US Data  
* 3. Java API  
* 4. Node Collector  
* 5. C++ API (required)  
* 6. Batch Processor  
* 7. Java Samples  
* 8. Central Collector  
* 9. C++ Samples  
10. Done
```

```
Select a component: 10
```

4. Type 10 to select all of the components and press *Enter*.

The Loqate installation starts and a notification appears when the installation is complete, as shown below.

```
Installing Loqate...
Installing C+
+...

Installing C++
Samples...

Installing
Java...

Installing Java
Samples...

Installing
Batch...

Installing
Batch Samples...

Installing
SAMPLEDATA_LIN...

Installing
IM_LINUX64...

Installing
NC_LINUX64...

Installing
CC_LINUX64...
```

To install data, cd /software/loqate then run ./InstallManager.sh. The Install Manager requires a java runtime version of at least Java 7. A dedicated JRE has been installed in /software/loqate/jre. To use a locally installed JRE instead please edit the InstallManager.sh file. Please note that you may need to change the permissions of both the InstallManager.sh file and jre directories to allow your user to run these applications.

Installation complete.

Procedure: How to Download and Install the Loqate Data Packs

To download and install the country data packs for Loqate:

1. Change your directory to /software/loqate, as shown below.

```
# cd /software/loqate/
```

2. Execute the *InstallManager.sh* executable file, as shown below.

```
# ./InstallManager.sh
Native library STLPort failed to load, ignore this if not using
solaris OS.
java.lang.UnsatisfiedLinkError: no stlport in java.library.path
Welcome to the Installation Manager - version 12.0.0
Running using local API version 2.35.0.14781-9f14d3a
```

A prompt appears, asking if your network communication passes through a proxy server, as shown below.

```
Does your network communication pass through a proxy server (y/n)? n
```

3. Type *n* and press *Enter*.
4. Type the location to install the data packs (for example, */software/loqate/data*), as shown below.

```
Please enter the path to the data installation folder
/software/loqate/data
Valid folder found. Proceeding with a data installation.
```

A prompt appears, asking you for a license key, as shown below.

```
Please select from below:
Enter 1 if you have a license key
Enter 2 if you have a license pack
Enter 3 to exit
1
```

5. Type *1* and press *Enter*.
6. Type the supplied license key and press *Enter*, as shown below.

```
Please enter the license key: <enter_your_license_key_here>
```

```
Contacting license server to validate the license key.

Procedure: How to Set Loqate Environment Variables

Depending on your operating system, you must first modify the *.profile* and *bash_profile* files that are called when opening a shell.

1. Add the following lines at the end of these files:

```

export LD_LIBRARY_PATH=$LD_LIBRARY_PATH:/software/loqate
export LIBPATH=$LIBPATH:/software/loqate

```

2. Save and then close these files.
3. Open a new shell to implement any changes that were made to your environment variables.

Procedure: How to Verify Loqate Functionality

To verify Loqate functionality:

1. Edit the *runbatch.sh* file, as shown below.

```
# vi runbatch.sh
```

2. Modify line 8 by changing ~~-p~~ "V" to ~~-p~~ "VG", as shown in the following image.

3 Save and then close the *runbatch.sh* file

4. Execute the *runbatch.sh* file, as shown below.

```
# ./runbatch.sh
```

5. Edit the result file, which is named `sample.txt*Output.txt`, as shown below.

```
# vi sample.txt*Output.txt
```

6. Verify that the address verification codes (in the format of V44-I44-P7-100) and geolocation columns are populated, as shown in the following image.

Procedure: How to Set the Omni-Gen® DQ Cleanse JVM Arguments

To set the cleanse Omni-Gen® DQ JVM arguments:

1. Log in to the Omni-Gen Console.

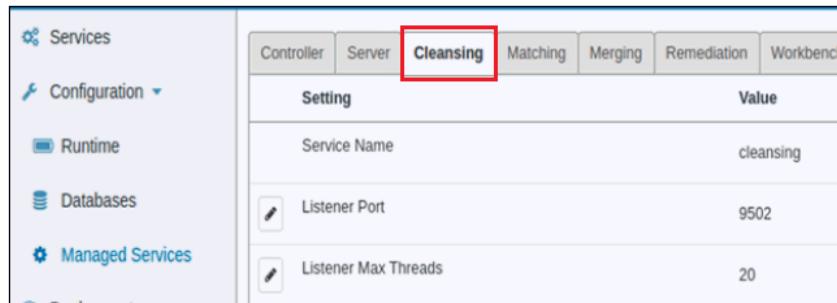

2. Expand Configuration in the left pane, as shown in the following image.

Setting	Value
Service Name	omniController
HTTP/HTTPS Listener Port	9500
JVM Process Max Memory	1024M
JVM Process Arguments	-Dserver.port=9500 Domnigen.config.f -Dlog4j.configurati

3. Click Managed Services, as shown in the following image.

Setting	Value
Service Name	omniController
HTTP/HTTPS Listener Port	9500
JVM Process Max Memory	1024M
JVM Process Arguments	-Dserver.port=9500 Domnigen.config.f -Dlog4j.configurati

4. Click the *Cleansing* tab, as shown in the following.

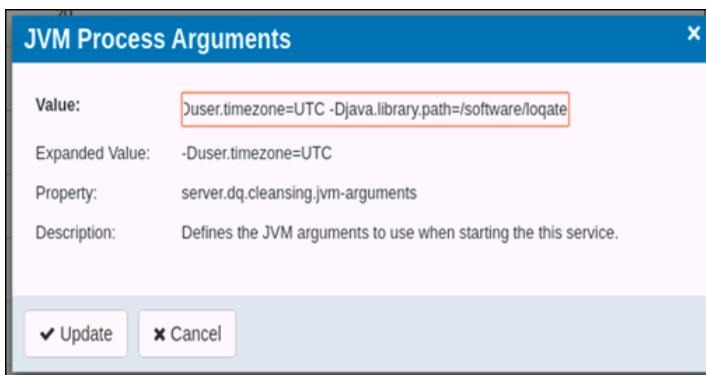

The screenshot shows a software interface with a sidebar on the left containing 'Services', 'Configuration', 'Runtime', 'Databases', and 'Managed Services'. The 'Managed Services' section is expanded, showing 'Pulse' and 'Cleansing'. The main area has a tab bar with 'Controller', 'Server', 'Cleansing' (which is highlighted with a red box), 'Matching', 'Merging', 'Remediation', and 'Workbench'. Below the tabs is a table with 'Setting' and 'Value' columns. The table rows are: 'Service Name' (Value: 'cleansing'), 'Listener Port' (Value: '9502'), and 'Listener Max Threads' (Value: '20').

5. Click the edit icon to the left of the *JVM Process Arguments* parameter, as shown in the following image.

The screenshot shows a 'JVM Process Arguments' dialog box. It lists three parameters: 'JVM Process Max Memory' (Value: '512M'), 'JVM Process Arguments' (Value: '-Duser.timezone=UTC'), and 'JVM Process Classpath' (Value: '/software/omnigen/OmniServer/mastering/rur'). The edit icon (pencil icon) to the left of 'JVM Process Arguments' is highlighted with a red circle.

The JVM Process Arguments dialog box opens, as shown in the following image.

The screenshot shows the 'JVM Process Arguments' dialog box with the following details:
Value: `-Duser.timezone=UTC -Djava.library.path=/software/loqate` (highlighted with a red box)
Expanded Value: `-Duser.timezone=UTC`
Property: `server.dq.cleansing.jvm-arguments`
Description: `Defines the JVM arguments to use when starting this service.`
Buttons at the bottom: `✓ Update` and `✗ Cancel`

6. In the Value field, type the following syntax and ensure there is a space between UTC and the new value.

`-Djava.library.path=/software/loqate`

7. Click *Update*.

The new value is now displayed for the *JVM Process Arguments* parameter, as shown in the following image.

 <i>JVM Process Max Memory</i>	512M
 <i>JVM Process Arguments</i>	-Duser.timezone=UTC -Djava.library.path=/software/loqate 
 <i>JVM Process Classpath</i>	/software/omnigen/OmniServer/mastering/runtime/lib/* /software/omnige

Procedure: How to Restart Omni-Gen

To restart Omni-Insurance:

1. Open a new shell (terminal window) to ensure that the new environment variables are set.
2. Completely stop, then start all of Omni-Insurance.
